## 1 Introduction

The aircrafts Polar 5 and Polar 6 are equipped with a GPS sensor for scientific equipment which continuously records the position of the aircraft. However, this sensor may vary in accuracy or fail completely for a certain time. Thus, the position data needs to be examined and processed to form a “master track”, which can be used for the geographical positioning of further data.

## 2 Workflow

The different steps of processing and validation are visualized in Figure 1.

**Figure 1: Workflow of master track data processing**

Unvalidated NMEA telegrams of the GPS sensor are extracted from the DAVIS SHIP data base (<https://dship.awi.de>) in a 1-second interval. They are converted to ESRI point shapefiles and imported to ArcGIS.

After a first visual screening of the resulting position tracks, a quality check is performed using a speed filter, an acceleration filter and a course filter. Filtered positions are flagged. In addition, a manual check is performed to flag obvious outliers. All flagged positions are removed from the track. Missing data up to a time span of 60 seconds are interpolated linearly.

To reduce the amount of points for overview maps, the master track is generalized by using the Ramer-Douglas-Peucker algorithm<sup>1,2</sup>. This algorithm returns only the most significant

<sup>1</sup> Ramer, U. (1972). An iterative procedure for the polygonal approximation of plane curves. *Computer Graphics and Image Processing*, (1) 3, 244-256

<sup>2</sup> Douglas, D., & Peucker, T. (1973). Algorithms for the reduction of the number of points required to represent a digitized line or its caricature. *The Canadian Cartographer*, (10) 2, 112-122

points from the track. Full master track and generalized master track are written to text files and imported to PANGAEA (<http://www.pangaea.de>).

### 3 Sensor Configuration

The aircrafts Polar 5 & 6 currently host one GPS sensor for scientific purposes (Table 1).

**Table 1: Sensor specifications of Polar 5 & 6**

<b>Sensor Name</b>	NovAtel FlexPak6, short: FlexPak6
<b>Description</b>	GPS1 - GPS receiver used for all scientific equipment
<b>Horizontal position accuracy</b>	Single point L1 1.5 m, Single point L1/L2 1.2 m , SBAS 0.6 m, DGPS 0.4 m,  OmniSTAR <ul style="list-style-type: none"><li>• VBS 0.6 m</li><li>• XP 0.15 m</li><li>• HP 0.1 m</li></ul> RT-20 0.2 m, RT-2 1 cm+1 ppm
<b>Time accuracy</b>	20 ns
<b>Velocity accuracy</b>	0.03 m/s
<b>Data rate</b>	Used: 1Hz, max: 100Hz
<b>Installation point</b>	Antenna on cabin roof

## 4 Extracted Data

Navigation data (NMEA telegrams) of the Polar 5 & 6 campaigns between 2012 and 2015 was extracted from the DAVIS SHIP data base (dship.awi.de). The data of the positioning sensor for scientific purposes was extracted in a 1-second interval. Flight information was gathered from DAVIS SHIP if available.

Each campaign with the number of exported flights and the percentage of available position data within the exported time frame is shown in Table 2.

**Table 2: Extracted flights per campaign and mean data availability**

Year	Campaign	#	Availability [%]
2012	NGT	13	51.6
2012	PAMARCMIP	19	98.1
2012	TIFAX	11	82.5
2012	VERDI	18	93.2
2013	AIRMETH	19	100.0
2013	DOMEcair	21	93.0
2013	MaBaJu	2	100.0
2013	PAMARCMIP	9	99.9
2013	STABLE	15	99.9
2013	TOP79.5	6	100.0

2015	NETCARE P5	18	99.4
2015	NETCARE P6	14	96.6
			414

## 5 Processing

### 5.1 Data quality and manual flagging

The extracted data is converted to ESRI point shapefiles and imported to ArcGIS. The tracks are inspected visually, to evaluate data quality. After that, a quality check is performed using a speed filter, an acceleration filter, and a change of course filter. A second visual screening is then carried out to remove obvious outliers manually. Filtered positions are flagged.

### 5.2 Master track creation

During the master track creation all previously flagged positions are omitted. To keep the occurrence of data gaps as low as possible, all missing data points with a timespan smaller than 60 seconds are interpolated. Data gaps larger than 60 seconds are marked as such within the final master track.

### 5.3 Generalization

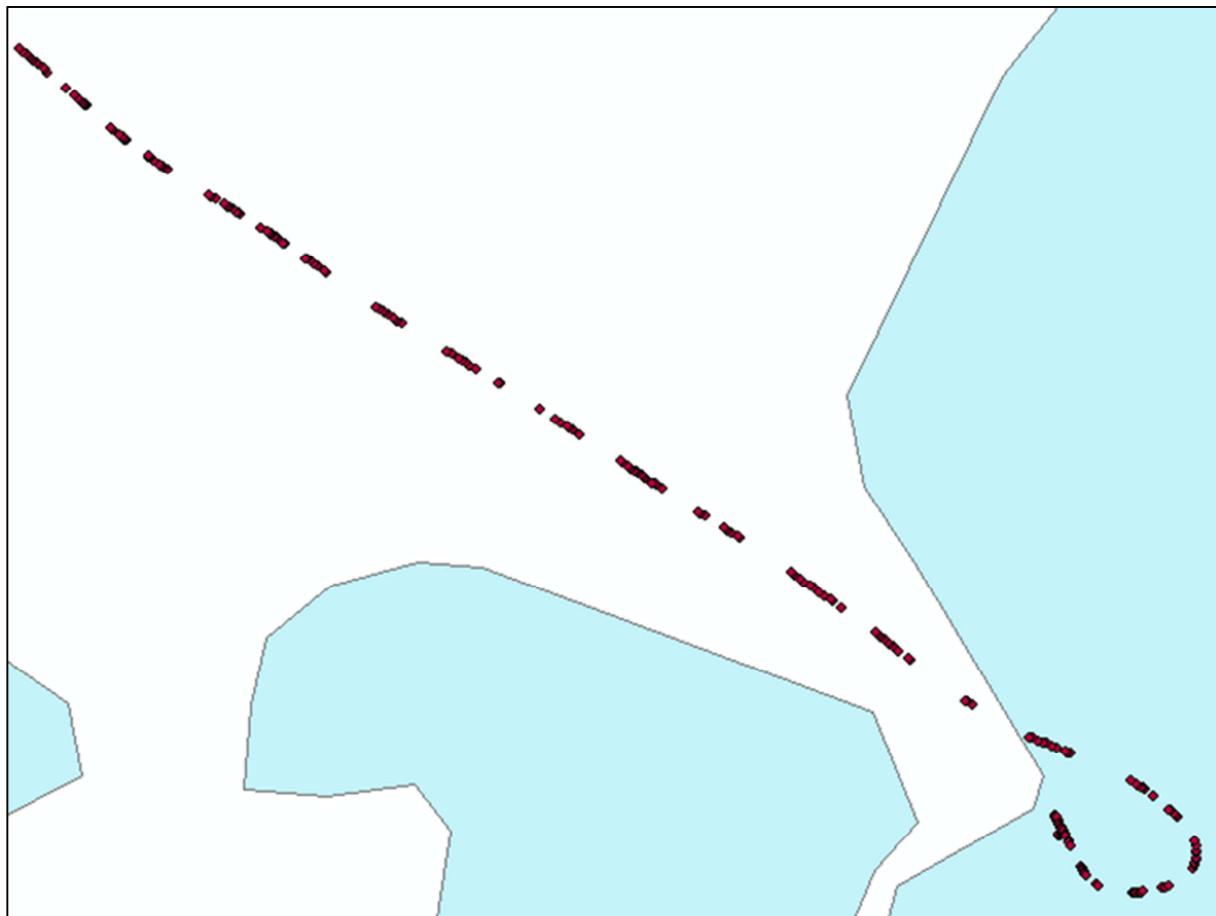

The master track is generalized to receive a reduced set of the most significant positions of the track using the Ramer-Douglas-Peucker algorithm and allow a maximum tolerated distance between points and generalized line of 4 arcseconds.

## 5.4 Typical errors in the dataset

### NovAtel FlexPak 6

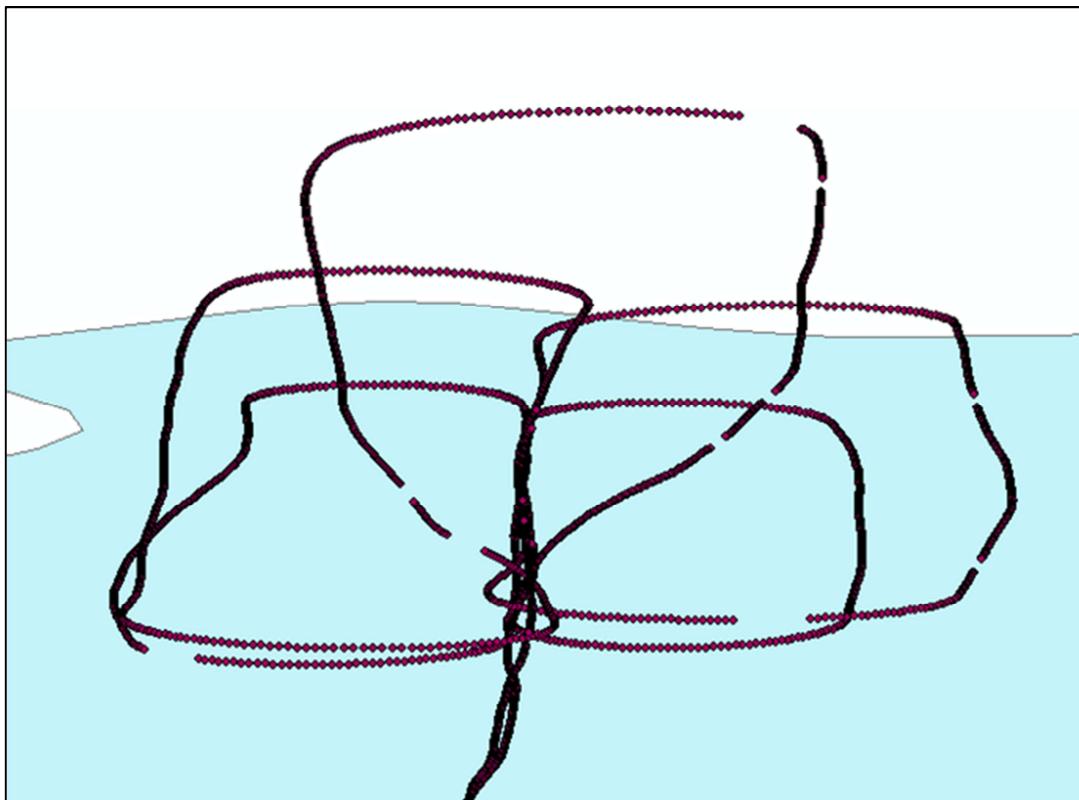

The errors of the scientific GPS sensor can be summarized in 4 groups:

1. 'Stuttering' of the GPS sensor. Many dropouts in a short interval (Figure 2).

**Figure 2: Example of GPS dropouts from TIFAX (2012) – 1206080101** The GPS drops out in short intervals over a long period of time.

2. Dropouts of the GPS sensor in longer intervals (Figure 3).

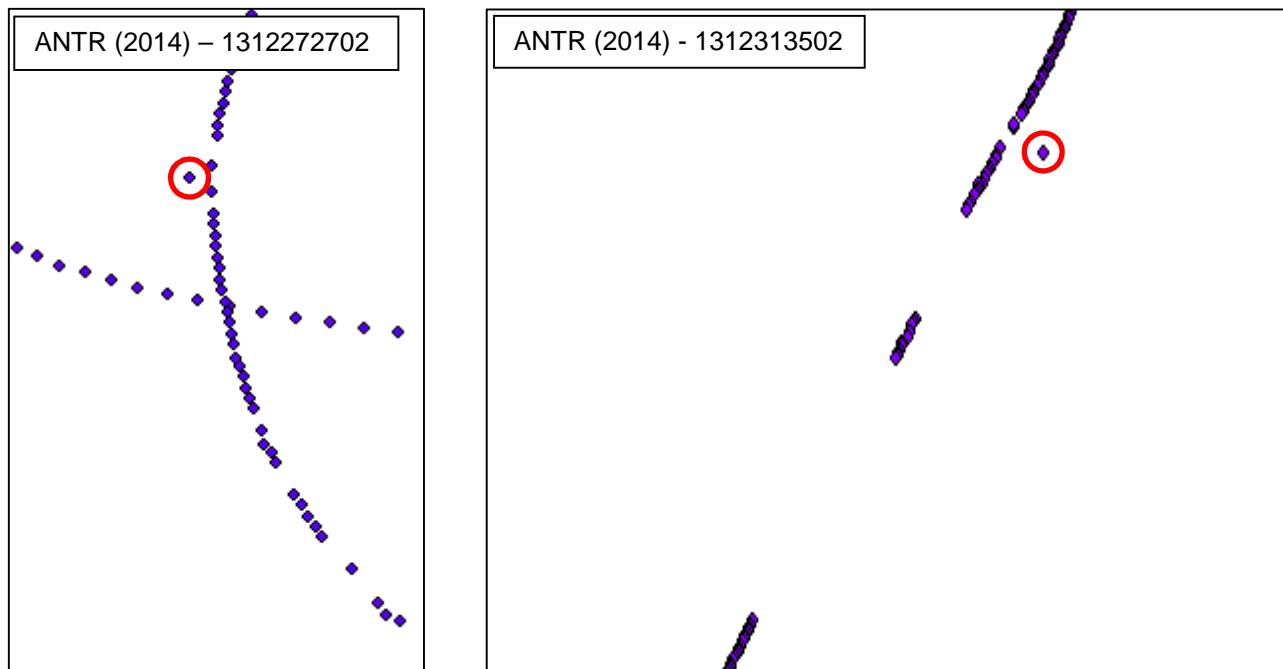

**Figure 3: Dropouts of the GPS sensor from PAMARCMIP (2012) - 1203260211.**

3. GPS not available at takeoff or before touchdown of the aircraft. Commonly caused by an early shutdown / late startup of the GPS sensor (Figure 4).

**Figure 4: Early shutdown of the GPS sensor from VERDI (2012) - 12030601.**

4. Single outliers (Figure 5)

**Figure 5: Single outliers that deviate from the track.**

## 6 Scores

### 6.1 Calculation

In order to evaluate the quality of a created master track, a single score value is calculated using the raw dataset, the automated and manual filters flagging, and the resulting master track.

First, a score value for the existing data is calculated. The equation 1 is applied for all flights. The availability of raw position data is also shown in Table 1.

$$raw_{score} = \frac{available\ points}{datapoints} \quad (1)$$

Secondly, the flagging score is calculated for all automatic filters and the manual inspection. The equation 2 is applied for all flights.

$$flagging_{score} = \frac{flagged\ points}{datapoints} \quad (2)$$

The value of all valid and non-interpolated track positions is calculated (3). This is done including also gaps and interpolated values of the final master track.

$$track_{score} = 1 - \frac{interpolated\ points + gaps + datapoints - points\ in\ track}{datapoints} \quad (3)$$

The single score-value is then derived calculating the mean of these three values scaled from 0 to 100 (4).

$$score = \frac{raw_{score} + (1 - flagging_{score}) + track_{score}}{3} * 100 \quad (4)$$

## 6.2 Resulting score-values

For the campaigns, the following mean score values were calculated (Table 3). A value of 100 means a perfect dataset. The score value of each individual flight can be found in the appendix.

**Table 3: Calculated score values for all processed Polar 5 and Polar 6 flights.**

Year	Campaign	#	Mean Score Value
2012	NGT	13	51
2012	PAMARCMIP	19	98
2012	TIFAX	11	83
2012	VERDI	18	93
2013	AIRMETH	19	100
2013	DOMECAir	21	93
2013	MaBaJu	2	100
2013	PAMARCMIP	9	100
2013	STABLE	15	100
2013	TOP79.5	6	100
2013	WEGAS	40	100
2014	ANTR	68	100
2014	LEAST	11	100
2014	NETCARE	20	99
2014	RACEPAC P5	16	100
2014	RACEPAC P6	20	100
2014	SMOSice	4	100
2015	ANTR	39	99
2015	MABANG P6	4	100
2015	MELTEXII P5	27	100
2015	NETCARE P5	18	99
2015	NETCARE P6	14	97

## 7 Reports

For each processed flight, a report is created and uploaded to the electronic Publication Information Center (ePIC; <http://epic.awi.de>). These reports include all metadata of the flight (duration, takeoff and touchdown locations, and start/end of extracted DSHIP data) and all information of the navigation sensor used.

The report also gives detailed descriptions of the data quality, the result of automated and manual filtering, the filter and generalization settings of the master track creation and the composition of the created track.

Additionally, the generalized track is shown on a map and the calculated score value is given.

## 8 Remarks

While working with the metadata extracted from DAVIS SHIP it became clear, that there were some wrong entries in those files.

For several flights wrong start and/or end locations were entered into the metadata-file. See Table 3 for detailed information (fixed airports in yellow).

**Table 3: Wrong airport locations in DSHIP**

Year	Campaign	Flight #	Start location	End location	DSHIP Source
