

Appendix A. List of taxa with synonyms.

This list does not represent a revision of Ostracoda- and Foraminifera species of the region investigated and is therefore neither complete nor entirely in a current status. Only those species found in the Wetterau region (Gebhardt, 2003) or those well known by the author were synonymized. Because genus names of original papers were largely retained, allocations to genera are partially outdated. The listed species occur within the stratigraphic horizons Lower Chattian (Cyrenen-Mergel), Upper Chattian (Cerithien-Schichten), lowermost Miocene (Corbicula-Schichten) or their equivalents.

1. Ostracoda

Remark: The remarks of Sonne (1982) and of Liebau (1991) concerning some species mentioned in the older literature have been considered.
