# CryoSat-2 Sea-Ice Thickness

## Sea-Ice Volume & Uncertainty

## Sea-Ice Freeboard & Uncertainty

Signal Quality

Radar Penetration

Sea Surface Height

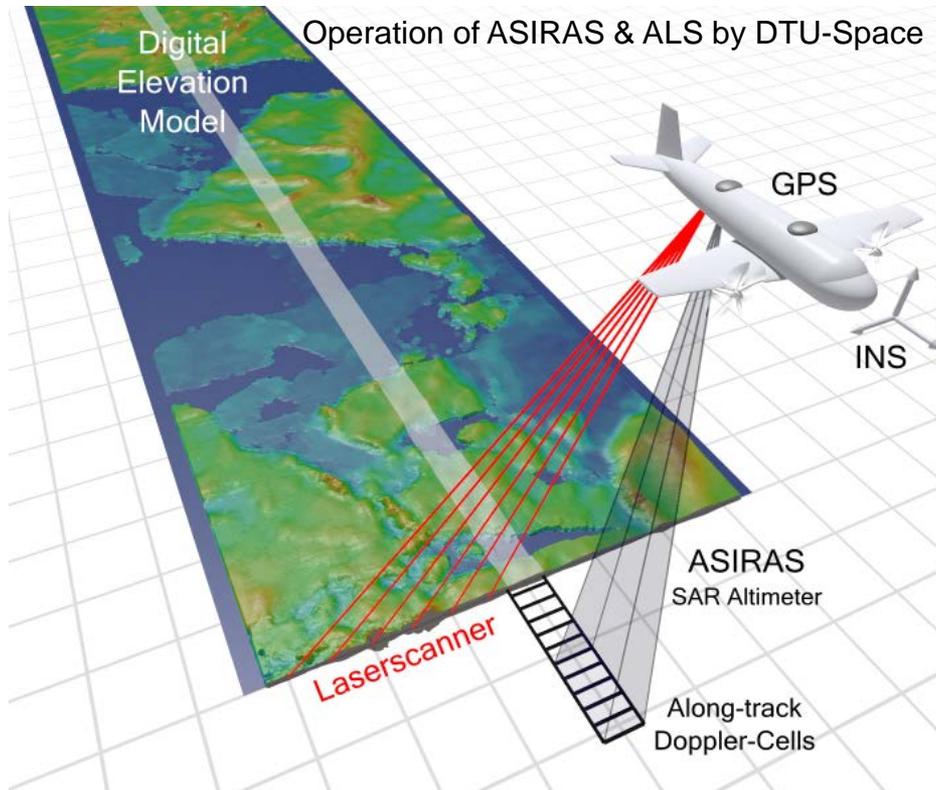

## Freeboard to Thickness Conversion & Uncertainty

Sea Ice Density

Snow Depth

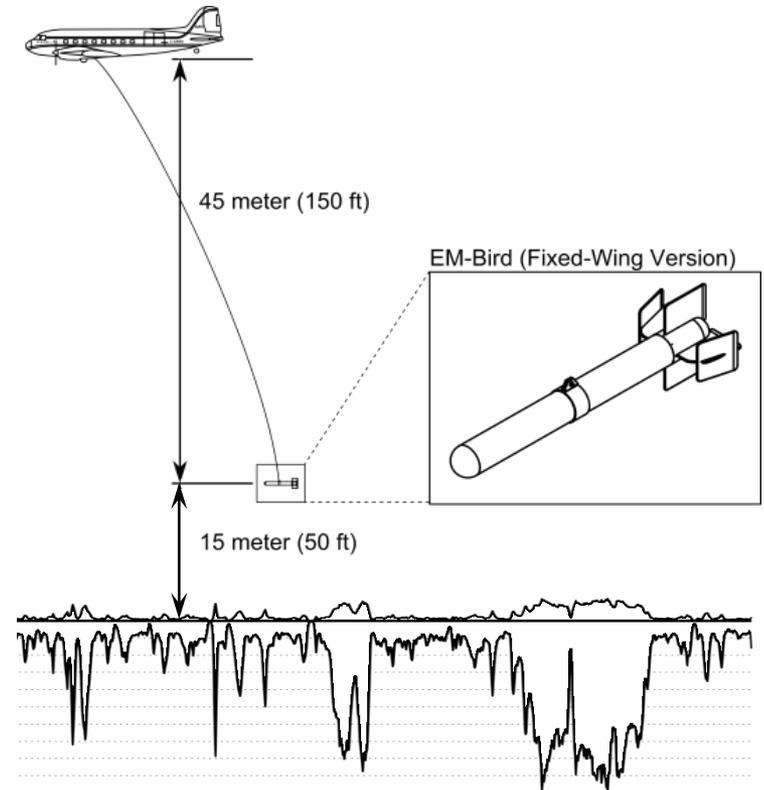

Snow Density

# CryoSat-2 sea-ice Cal/Val

## Laser – Radar Altimetry

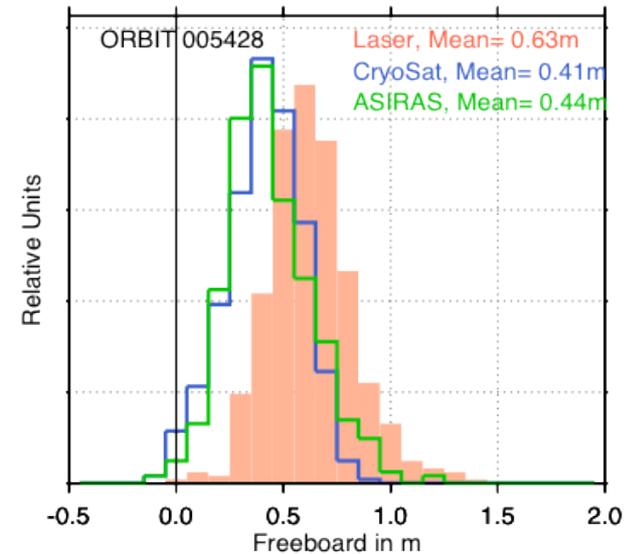

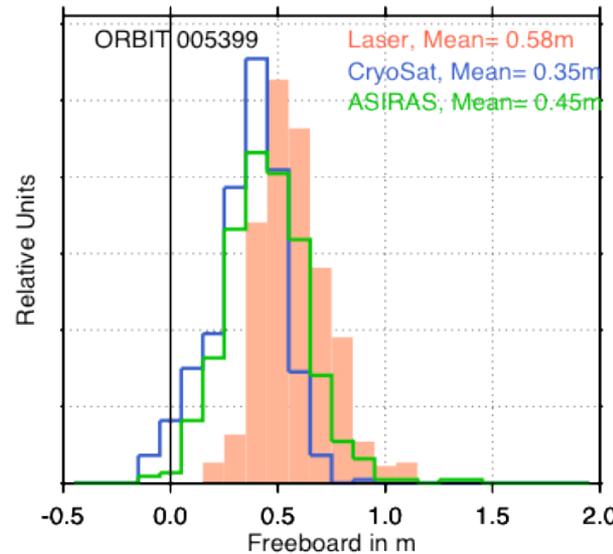

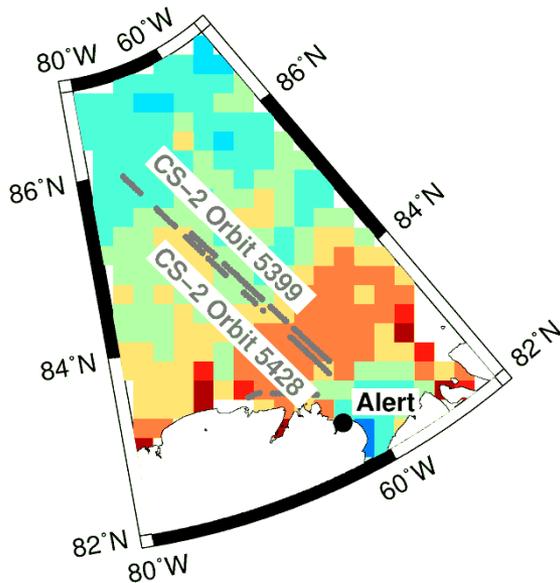

- Radar penetration into snow
- Sea-ice surface roughness
- Direct comparison to CryoSat-2

## Airborne EM (AEM) Thickness

- Sea-ice thickness data
- Helicopter and fixed-wing aircrafts
- Direct comparison to CryoSat-2

# Freeboard: Airborne vs. CryoSat-2

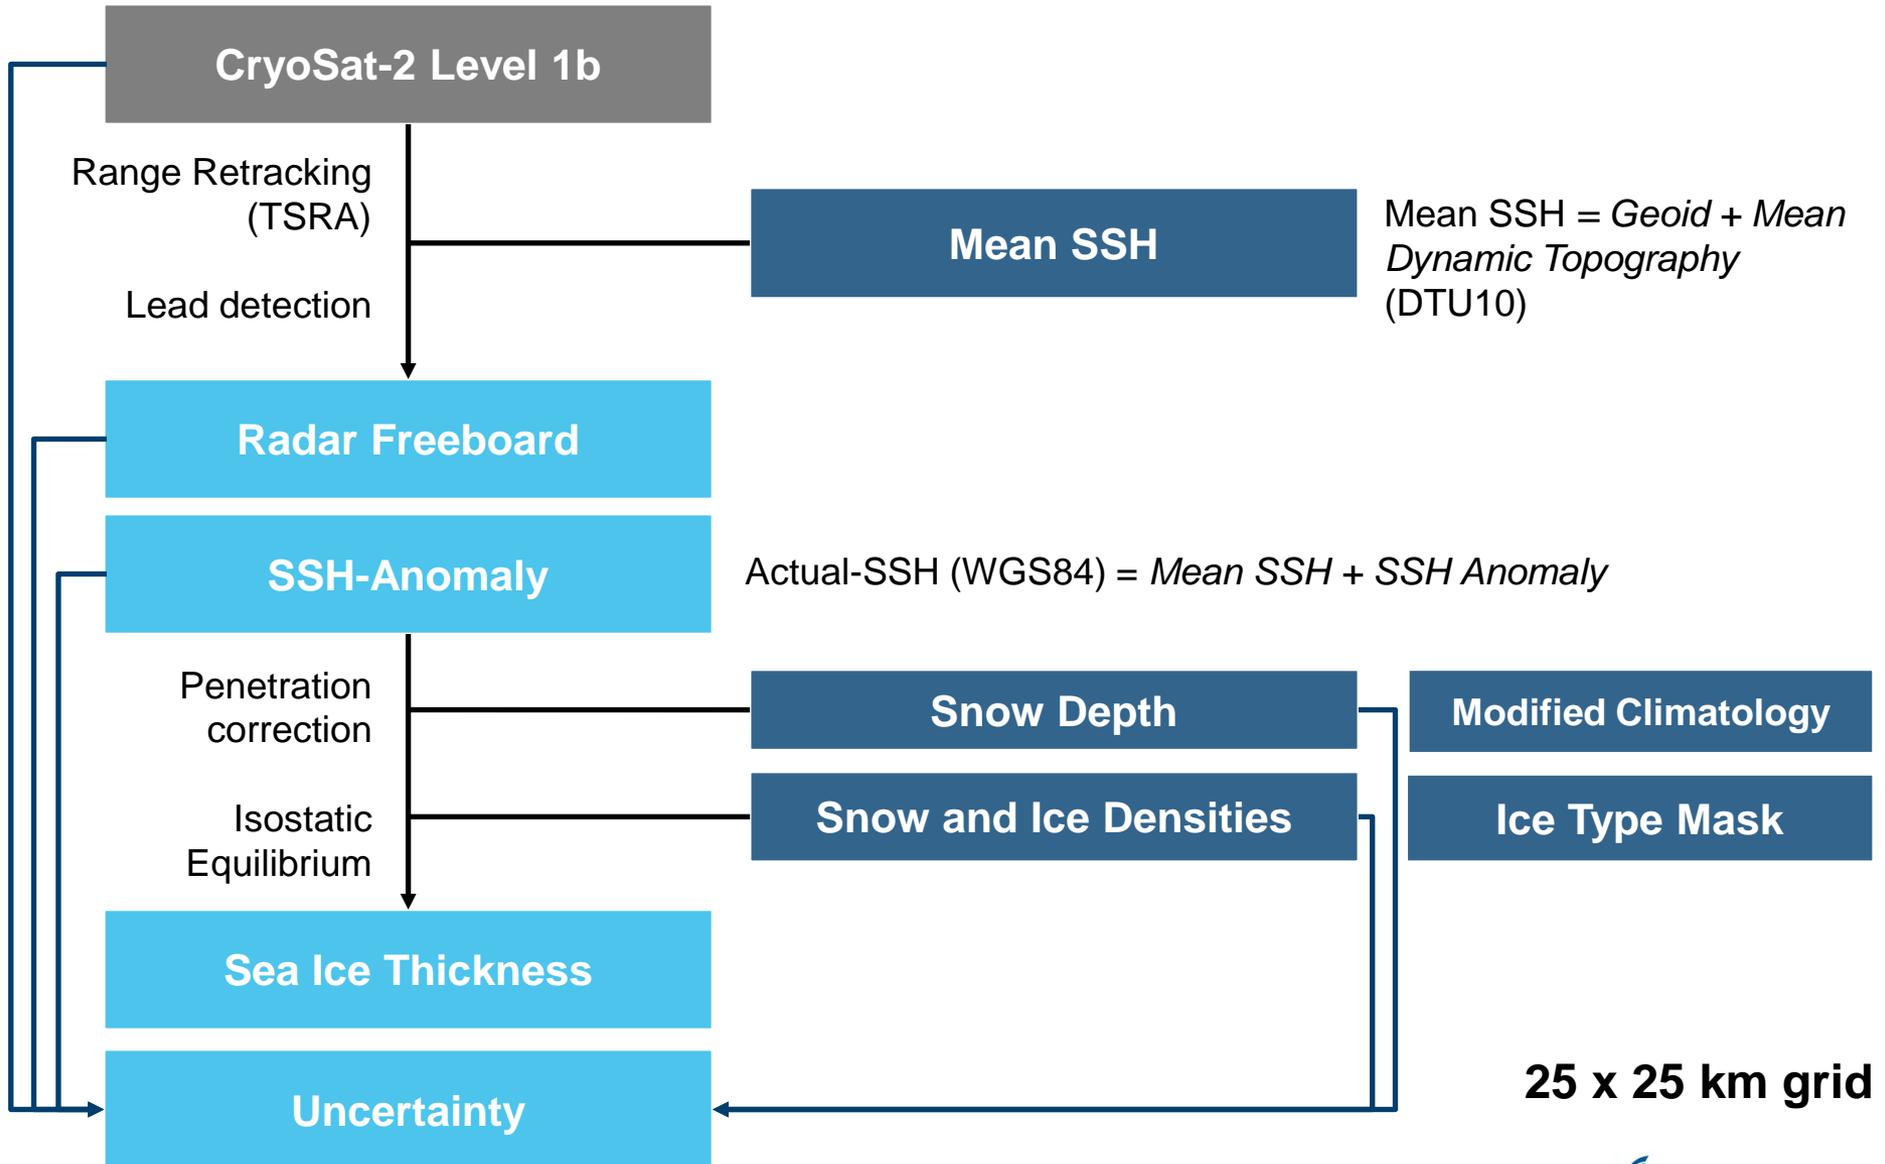

## Sea-Ice Freeboard Uncertainty

### Airborne (laser & radar) and CryoSat-2 freeboard

- Coincident Data Acquisition (CryoVEx 2011)
- Distribution of airborne radar and CryoSat-2 freeboard comparable
- Difference (**22 cm**) to laser freeboard smaller than expected snow depth (even for dry & cold snow)
  - Lower wave propagation speed in snow not accounted

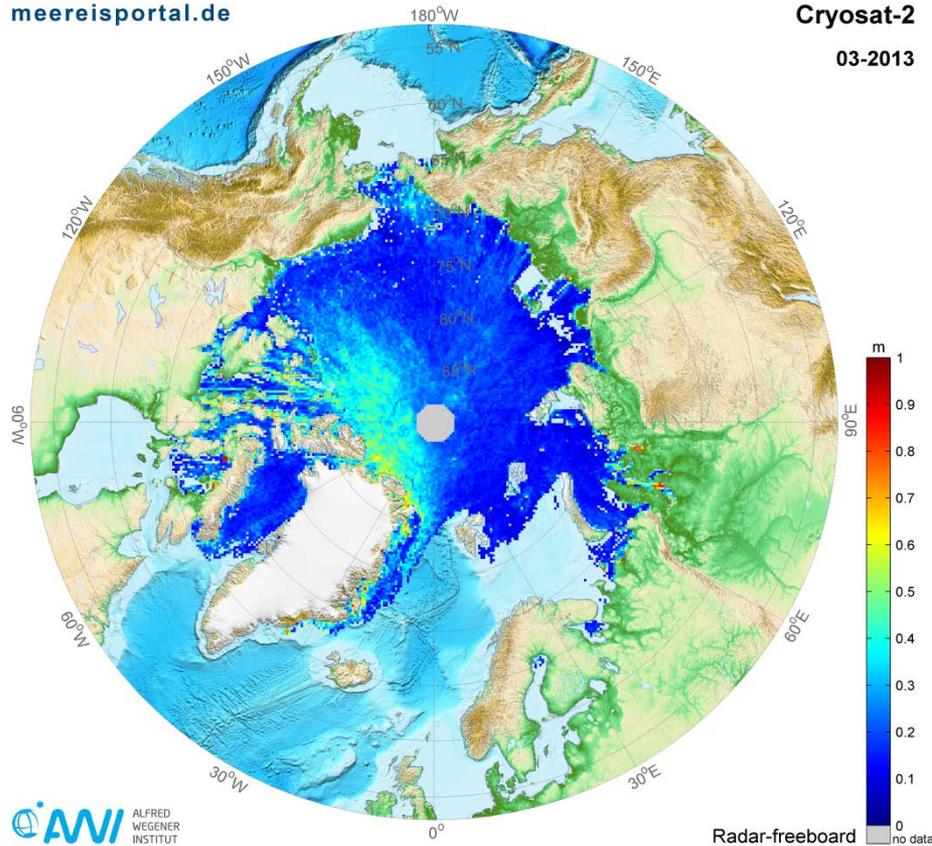

# CryoSat-2 processing scheme

# CryoSat-2: First results - Freeboard

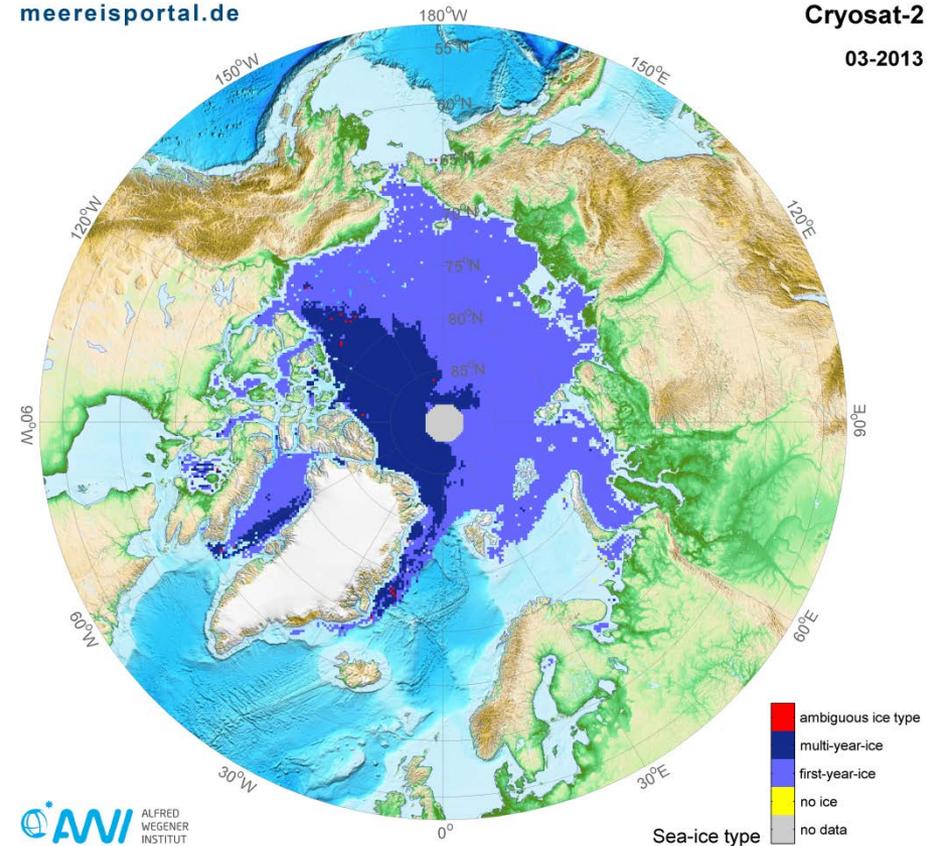

meereisportal.de

## Radar Freeboard

- Direct result from CryoSat-2 data
- No physical corrections (snow) applied

meereisportal.de

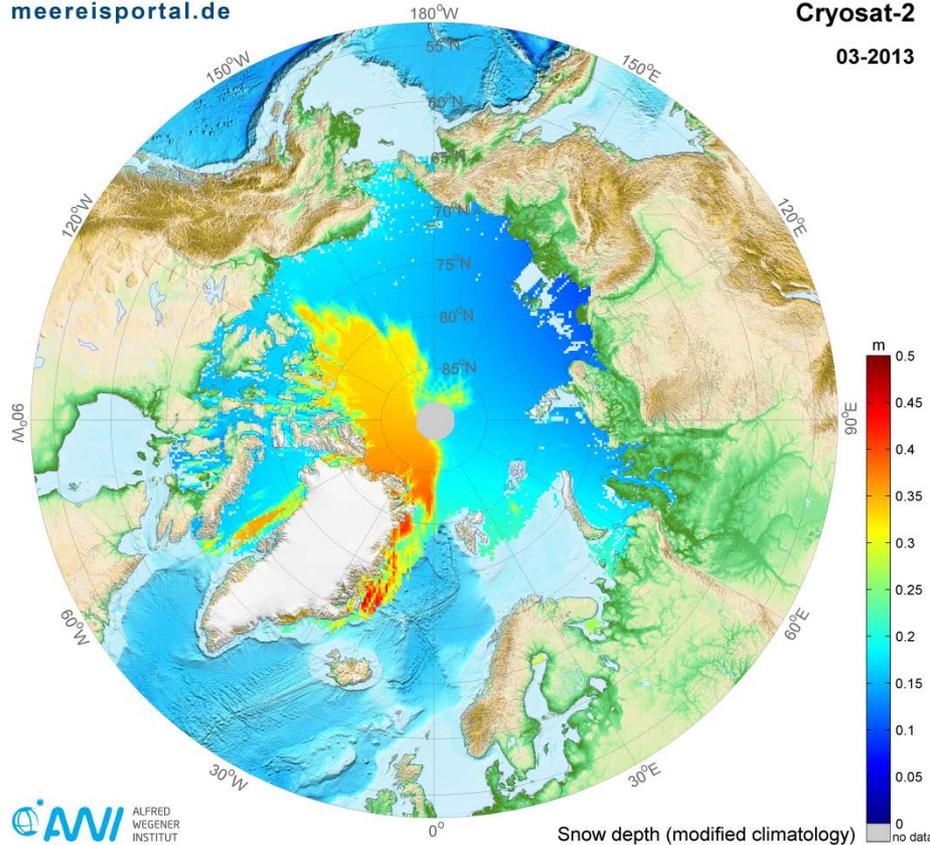

## Sea Ice Type (OSI-SAF)

- Main classification FYI / MYI
- Similar spatial distribution to radar freeboard

March 2013

# Sea-Ice & Snow Parametrization

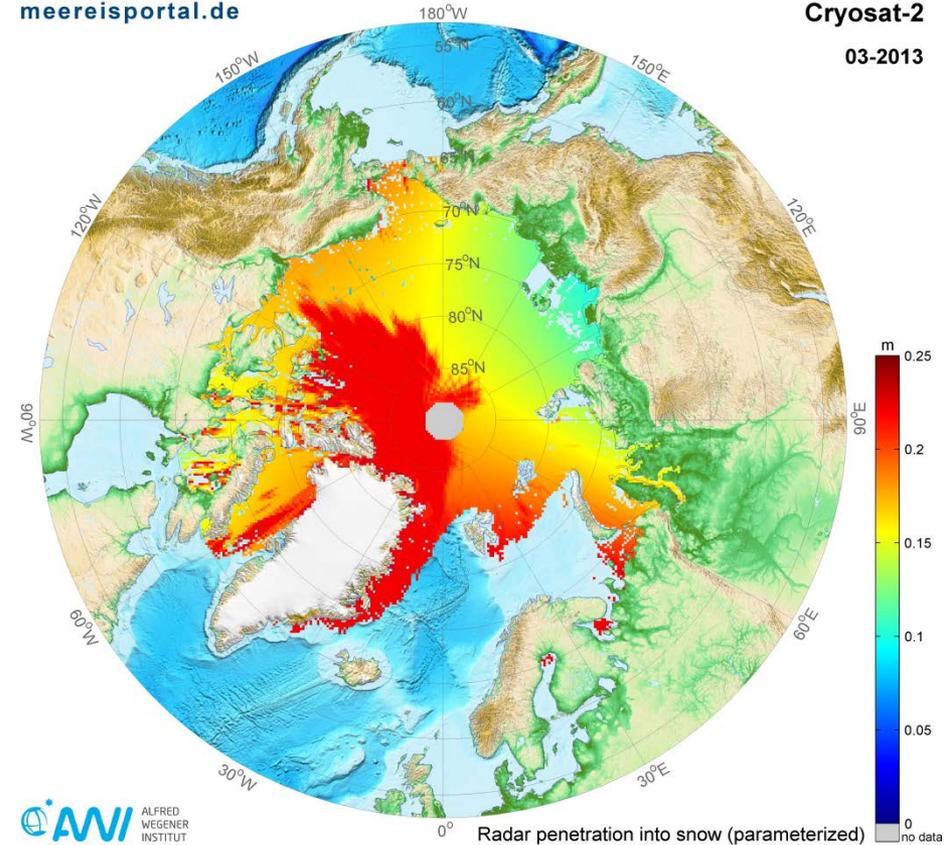

meereisportal.de

## Snow Depth

- Modified Climatology (Warren et al.)
- 50% over FYI (OIB, Kurtz et al.)

meereisportal.de

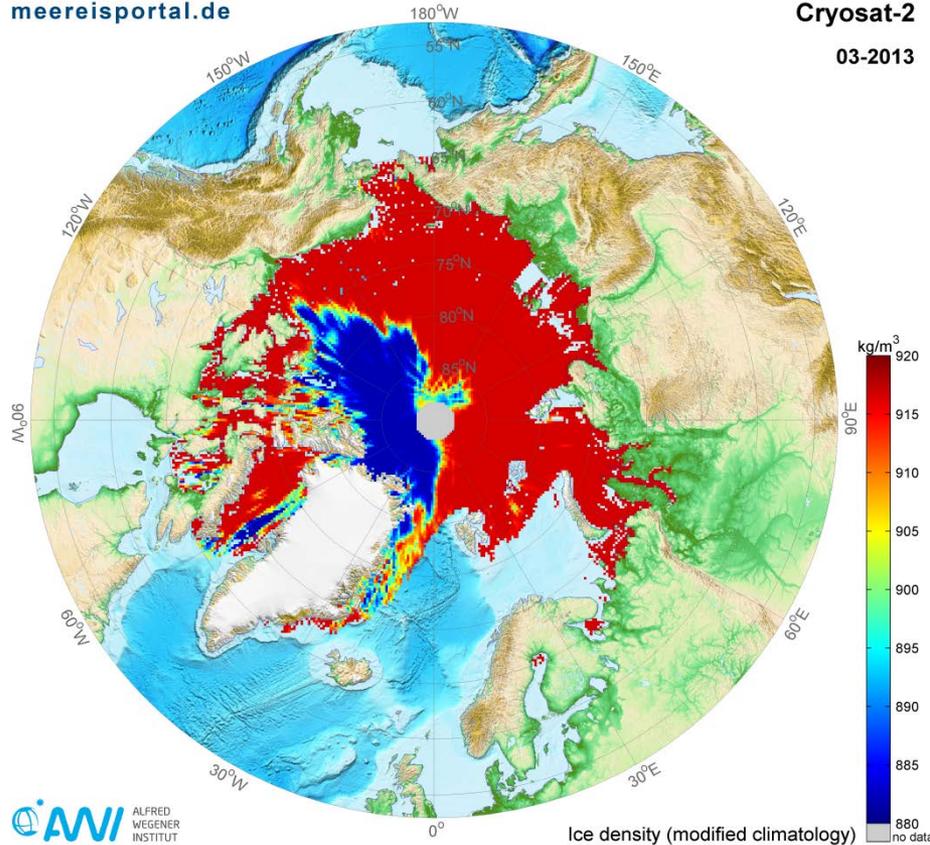

## Radar Penetration

- 22 cm (Airborne Validation Data 2011)
- FYI: full penetration to snow

# Sea-Ice & Snow Parametrization

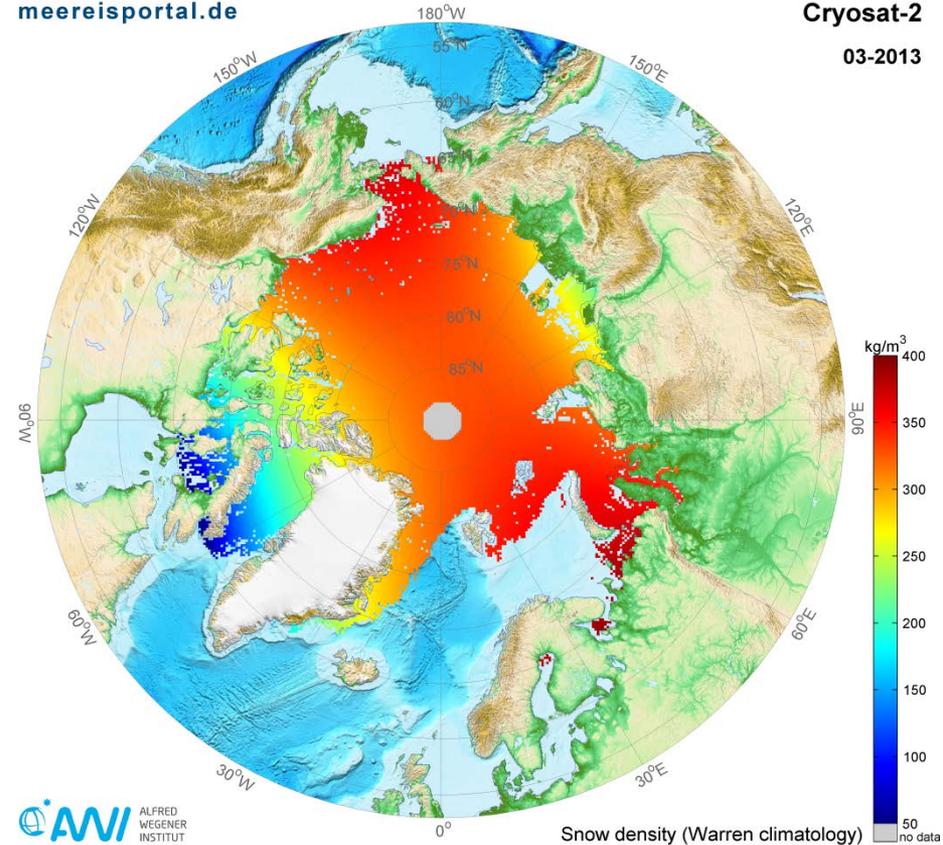

meereisportal.de

## Sea Ice Density

- FYI:  $916.7 \text{ kg m}^{-3}$
- MYI:  $882.0 \text{ kg m}^{-3}$

meereisportal.de

## Snow Density

- Climatology (Warren et al.)
- No differences between FYI & MYI

# Contribution to Error Budget

CryoSat-2 Level 1b	Speckle Noise	14 cm
Lead Detection	SSH-Uncertainty	27 cm *
Retracking	Var. Penetration	not yet quantified
<b>Freeboard</b>	<b>Cumulative Error</b>	<b>30 cm *</b>

Decreasing with distance & # detections

Snow Depth	Depth Variability	7/14 cm
Snow & Ice	Density Variability	10/100 kg/m <sup>3</sup>
<b>Thickness</b>	<b>Cumulative Error</b>	<b>2.5 m *</b>

FYI / MYI

SNOW / ICE

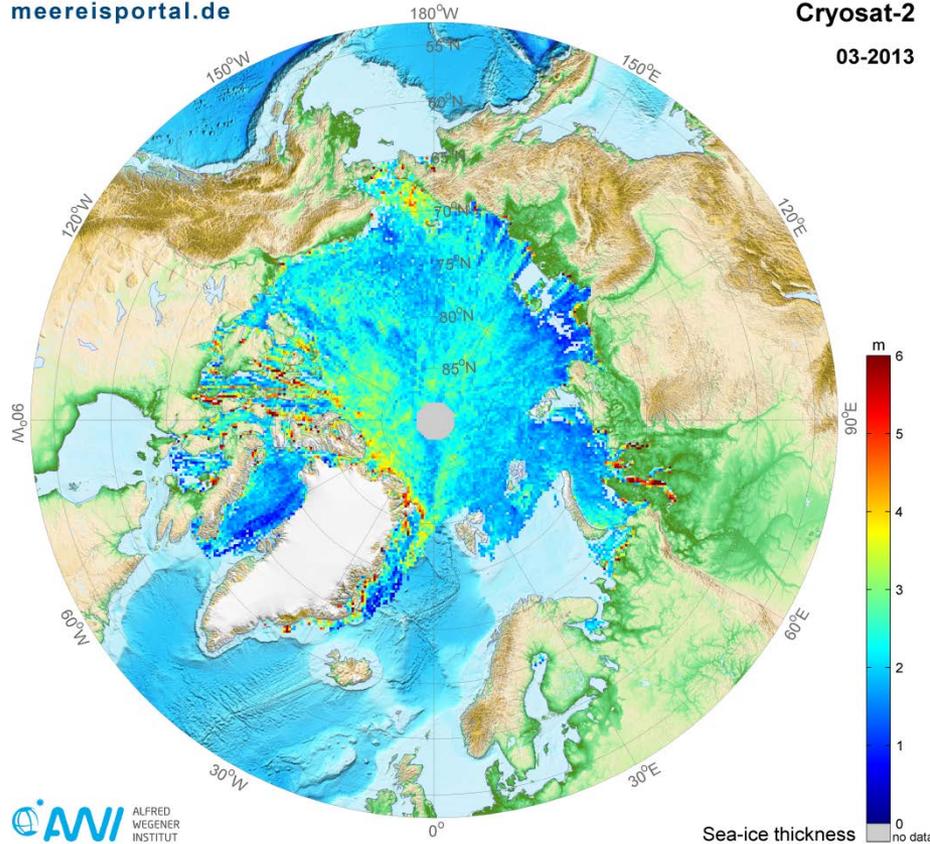

\* : Mean multi-look (point) error

**Error Propagation (Averaging 25 x 25 km)**

# CryoSat-2 First Results - Thickness

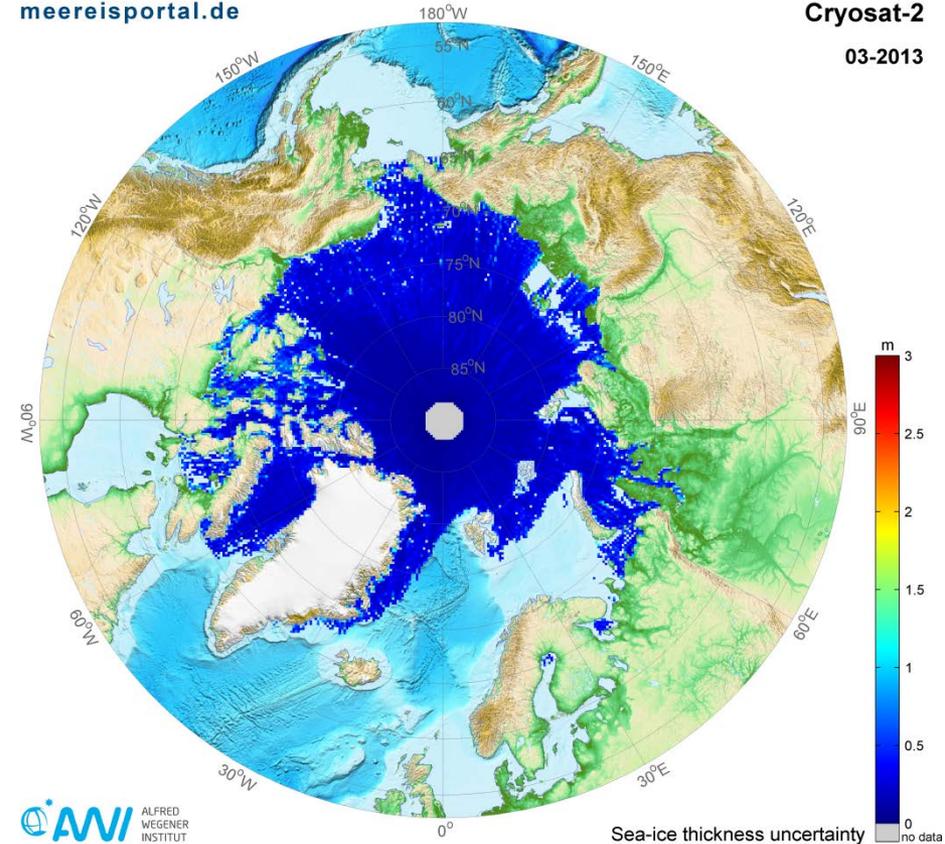

meereisportal.de

### Sea Ice Thickness

- Thick ice in FYI regions
- Artefacts from ice classification

meereisportal.de

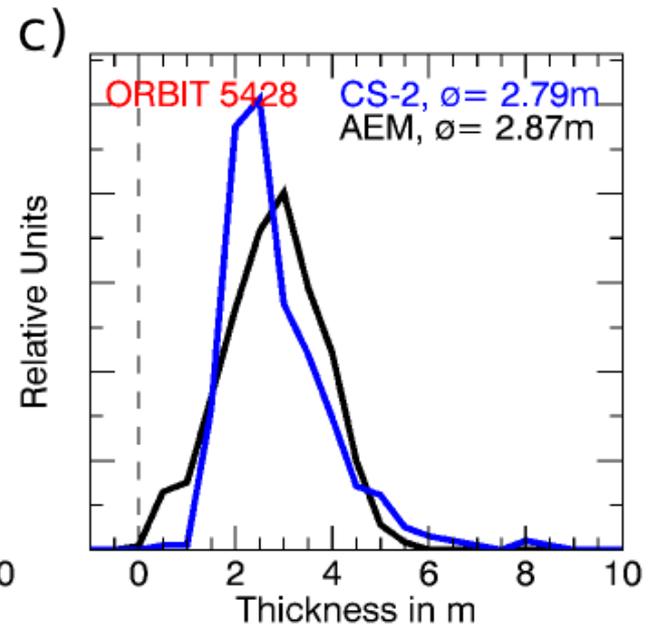

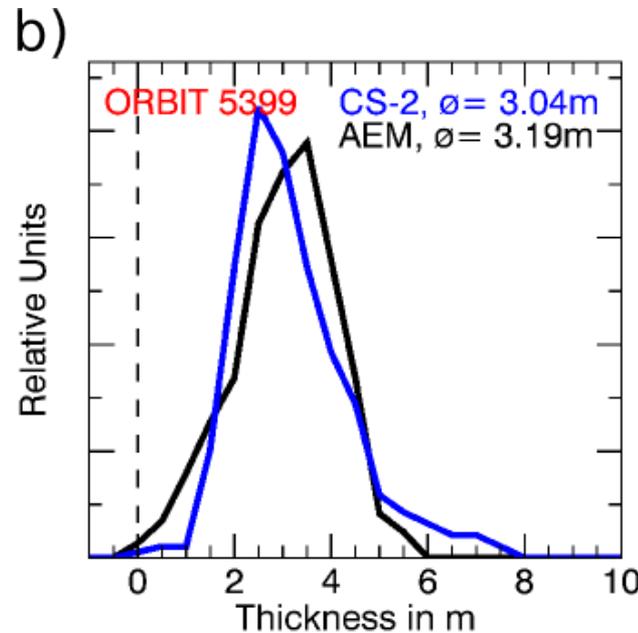

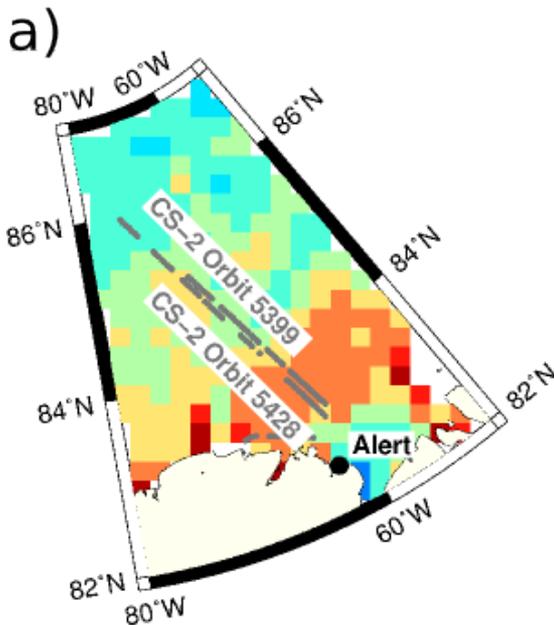

### Sea Ice Thickness Uncertainty

- Range: 0.5 m – 1 m
- Higher in Archipelago / Ice Edge

March 2013

# CryoSat-2 vs. AEM Thickness

## Sea-Ice Thickness Uncertainty

### Freeboard to Thickness Conversion

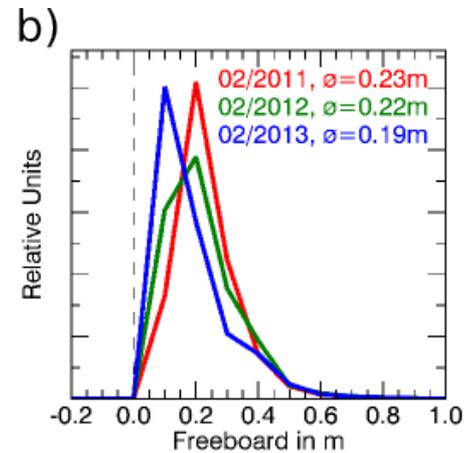

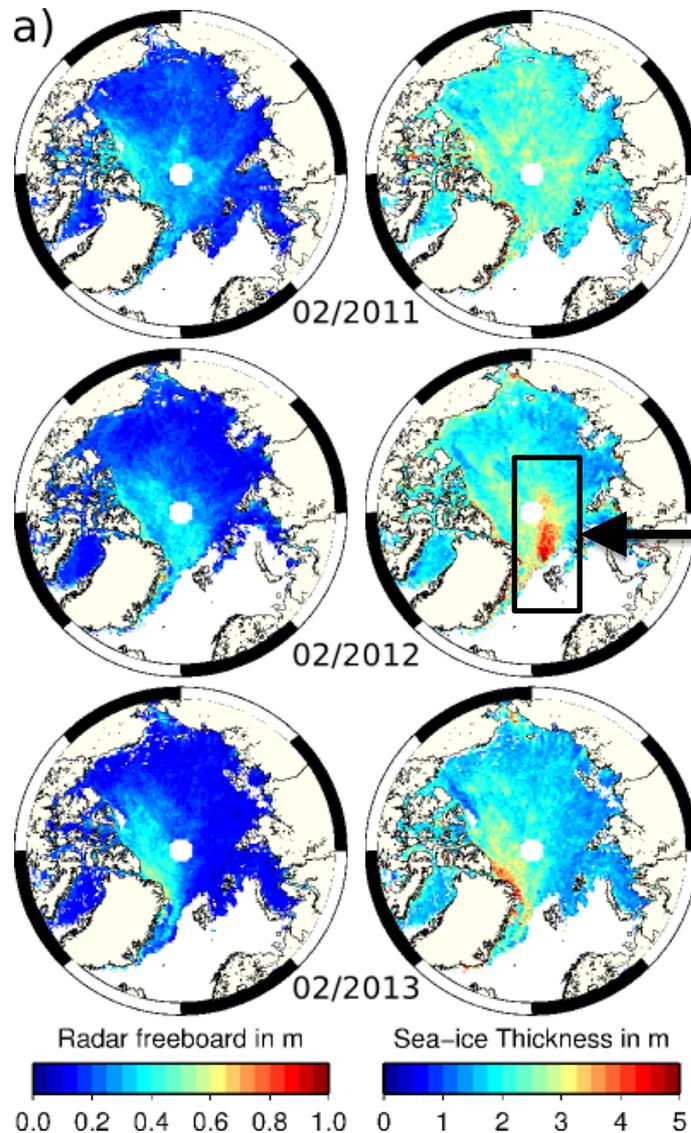

Distribution of AEM thickness and CryoSat-2 thickness

Comparable mean thickness of multi-year sea ice

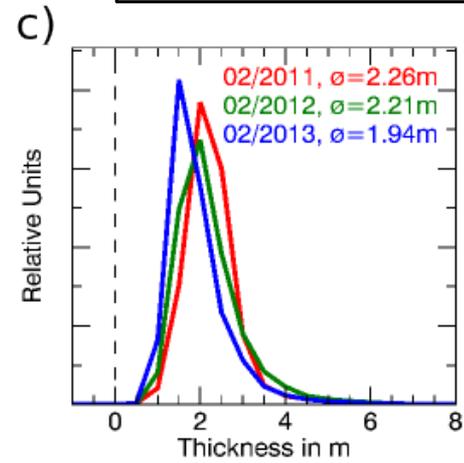

CryoSat-2 underestimates modal thickness

Validation in first-year ice regimes pending

# CryoSat-2 "Trend" 2011 - 2013

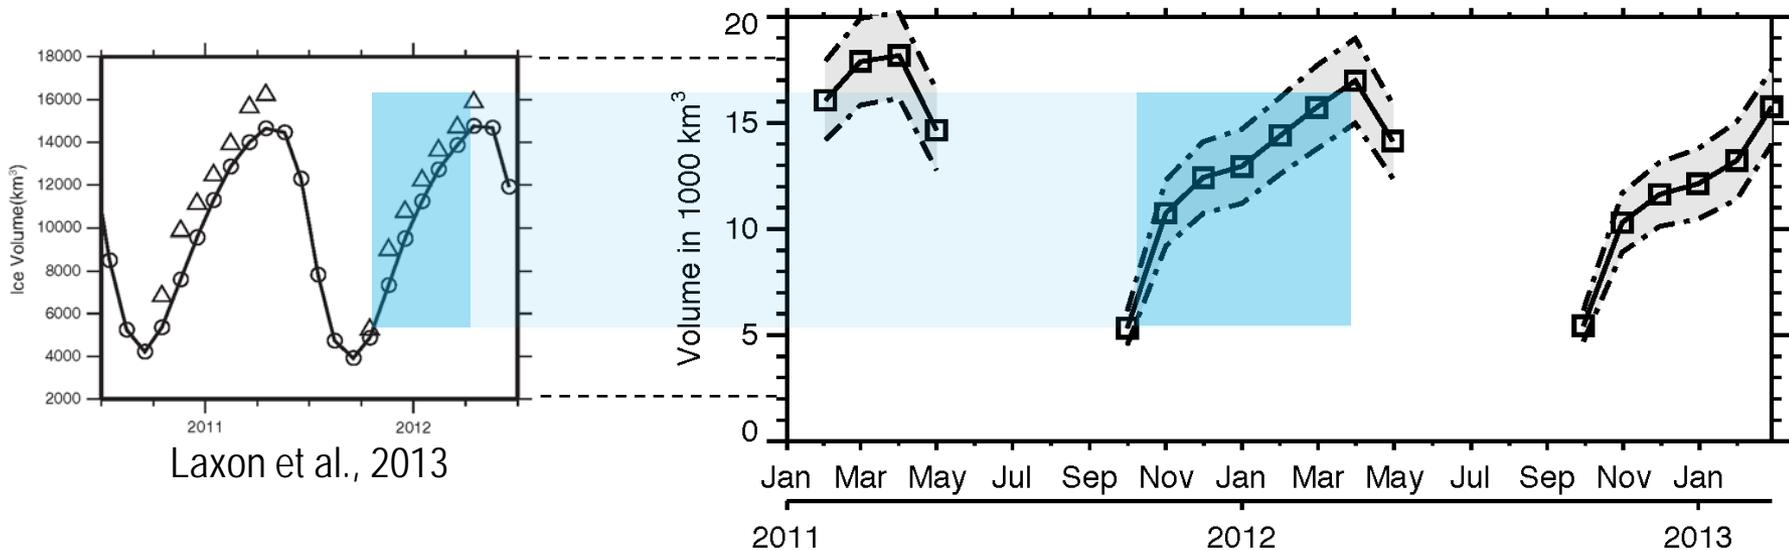

Ice-Type Artifact

Ricker et al., 2013, in preparation

# Arctic Sea-Ice Volume 2011 - 2013

Laxon et al., 2013

Ricker et al., 2013, in preparation

## Comparison to Seymours & Katharines publication

Comparable volume range for winter season 2011/2011

Data masks might differ slightly (AWI data: ICESat domain for except Baffin Bay)

# Data Availability

**Airborne EM Sea Ice Thickness Surveys**

AMSR-2 sea ice concentration July 15, 2013  
(c) 2013, IUP Uni Bremen

Polarstern (ANTXXIX/7) currently in the Weddell Sea (<http://expedition.awi.de/>)  
- Continuation of CryoSat-2 feasibility study -

# CryoSat-2 Freeboard & Thickness

## Calibration & Validation Results

radar freeboard  $\neq$  ice freeboard | unknown spatial pattern of radar penetration

CryoVEx: good agreement of airborne and satellite freeboard

## Remaining Issues

snow, snow, snow! | knowledge of spatial & temporal distribution limits thickness accuracy  
remote sensing signature / mass load

sea ice type | ice type mask can create thickness artefacts

## Future Plans

Feasibility study Antarctic sea ice

Impact of surface roughness  $\triangleleft$  Forward model
