

# Relation between sea-ice freeboard and draft and its seasonal evolution in the Central Arctic

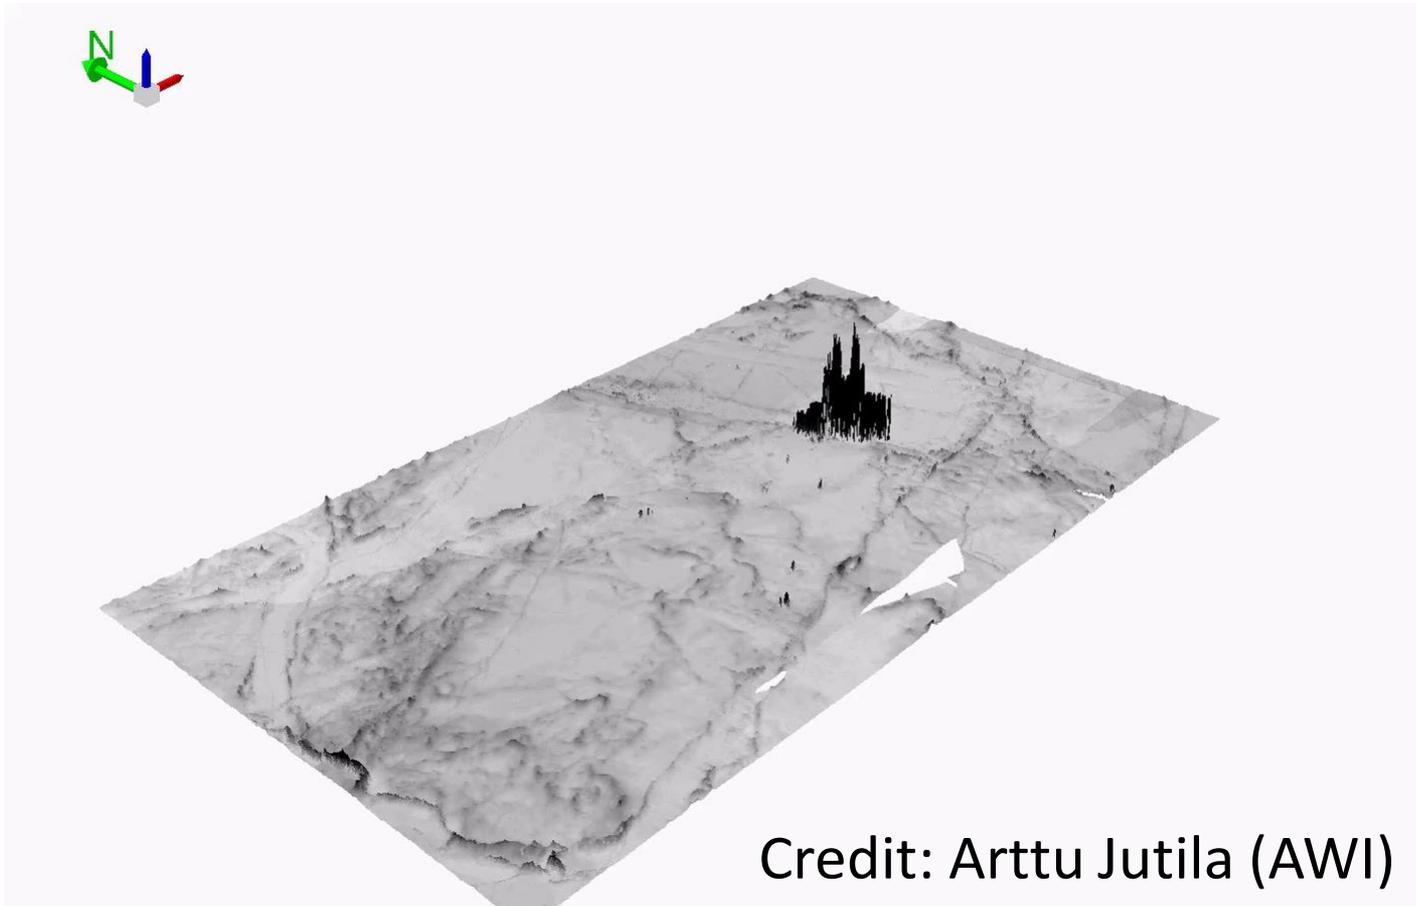

Philipp Anhaus, Christian Katlein, Ilkka Matero, Marcel Nicolaus,  
Nils Hutter, Arttu Jutila, Christian Haas

2<sup>nd</sup> MOSAiC Science Conference  
University of Colorado, Boulder, CO, USA  
13-17 Feb 2023

# Evolution of sea-ice geometry

Objective 1: Relation between freeboard and draft

Objective 2: Calculate draft from only freeboard measurements

Credit: Arttu Jutila (AWI)

## **Geoscience**

- Melting and freezing processes of different ice types
- Estimating the ice thickness distribution for large-scale modelling

## **Atmospheric & ocean science**

- Determining roughness to derive wind and water drag coefficients

## **Industry**

- Risk evaluation of offshore structures
- Model dynamics and confinement of oil spills

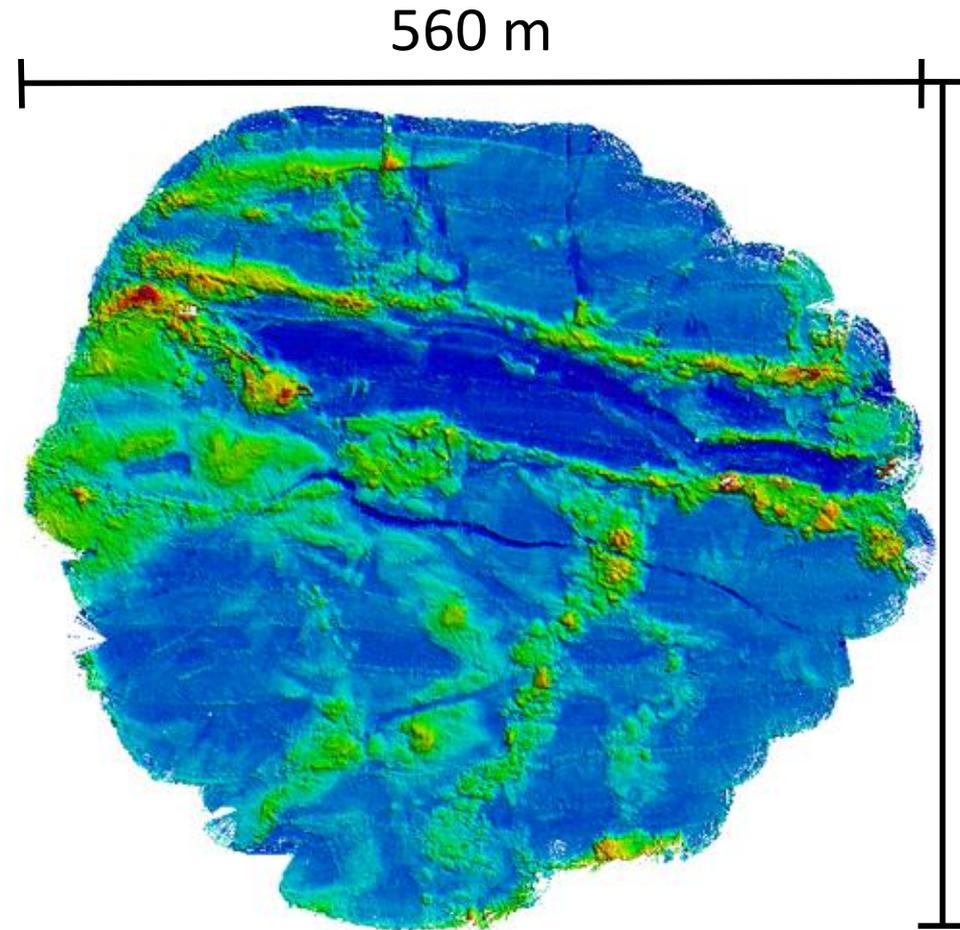

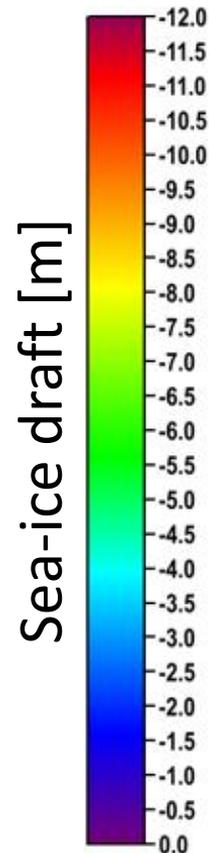

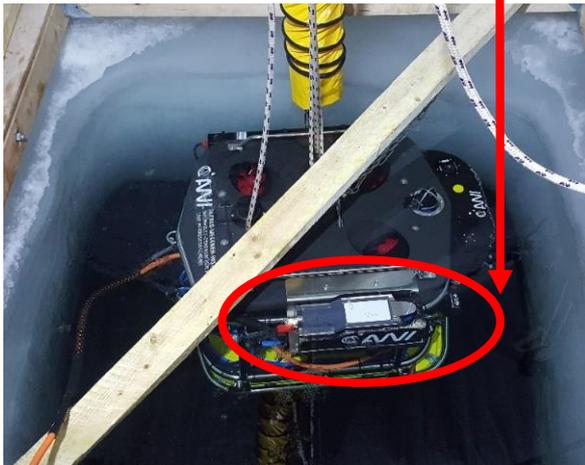

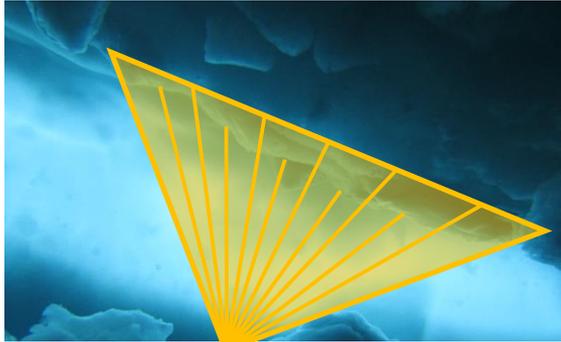

## **Navigation**

- Assessing the mechanical force that ships need to overcome
- Sound scattering of acoustic positioning systems

# Sea-ice draft from below

- Sea-ice draft from an acoustic multibeam sonar

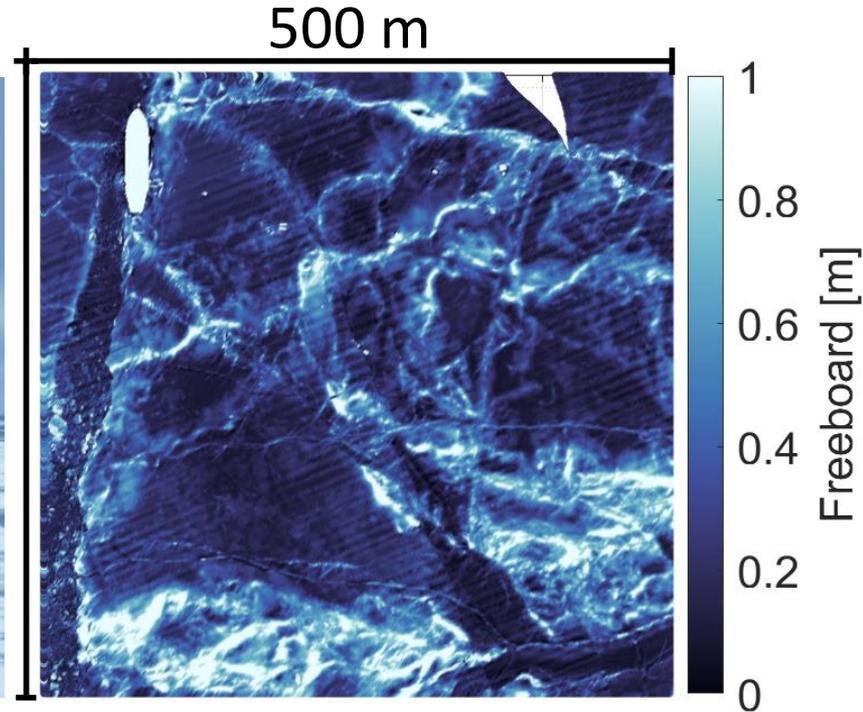

Philipp Anhaus, Christian Katlein, Marcel Nicolaus

# Sea-ice freeboard from above

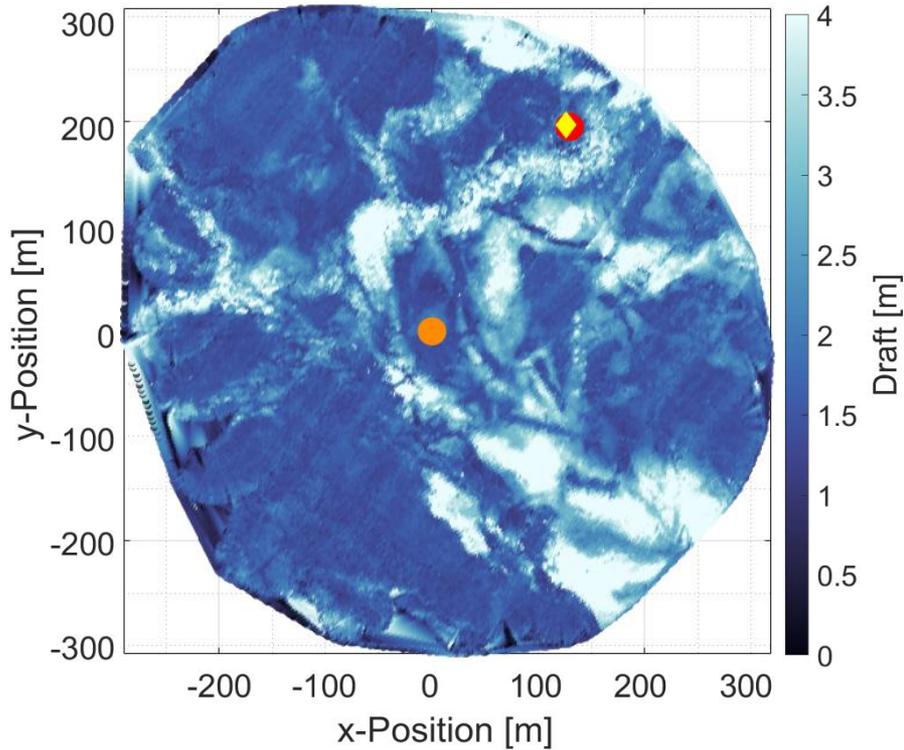

- Freeboard estimates from an airborne laser scanner

Nils Hutter, Arttu Jutila, Stefan Hendricks, Christian Haas

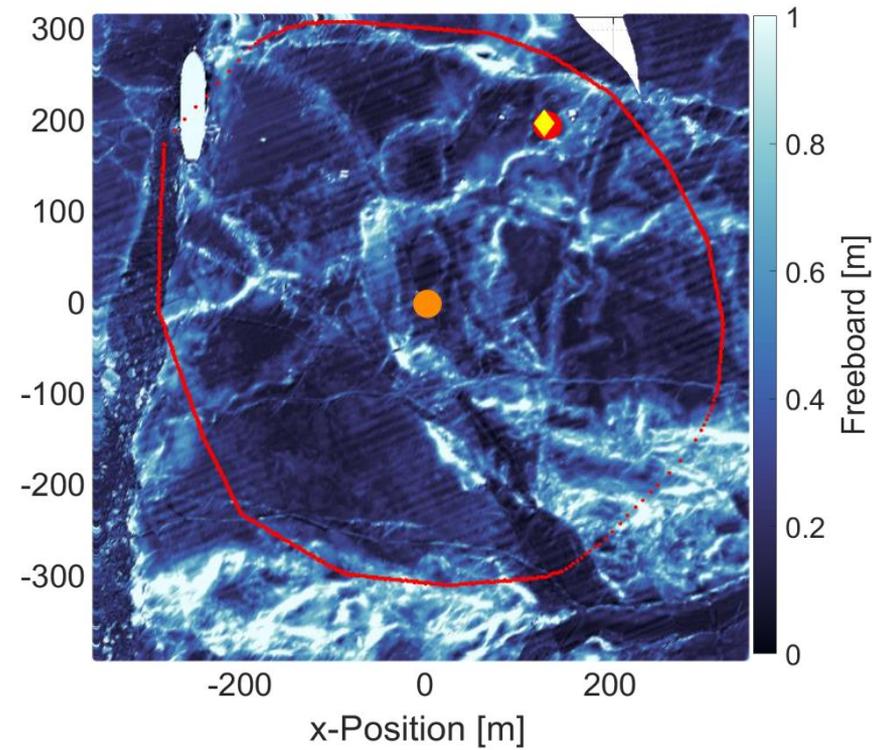

# Merging to 3D

Multibeam sonar  
07 Jan 2020

Airborne laser scanner  
07 Jan 2020

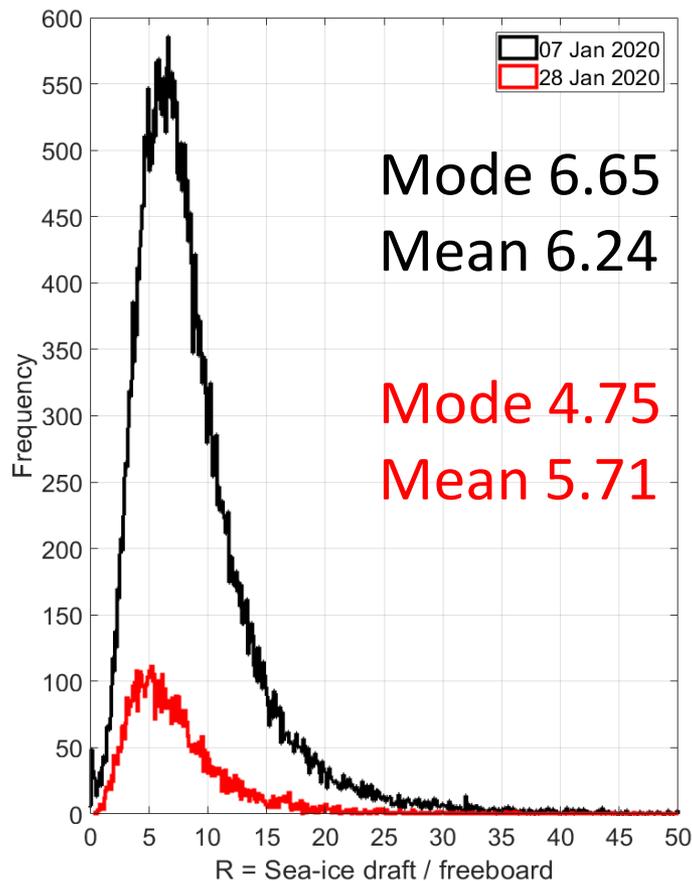

- Turbulence cluster, ROV coord.    • ROV hole
- ♦ Turbulence cluster, ALS coord.

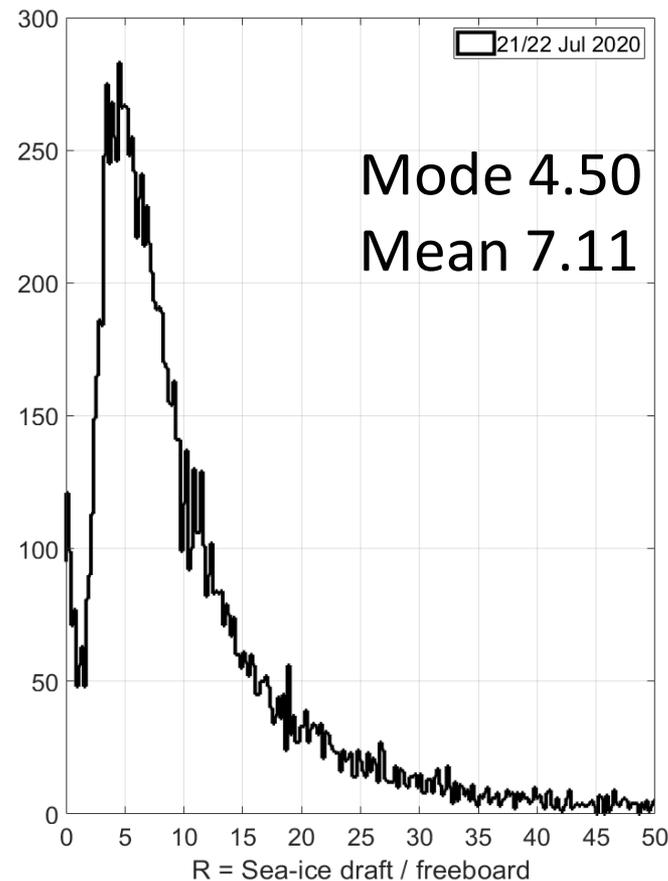

# Objective 1: Relations

$$R = \text{sea-ice draft} / \text{freeboard}$$

Winter

Summer

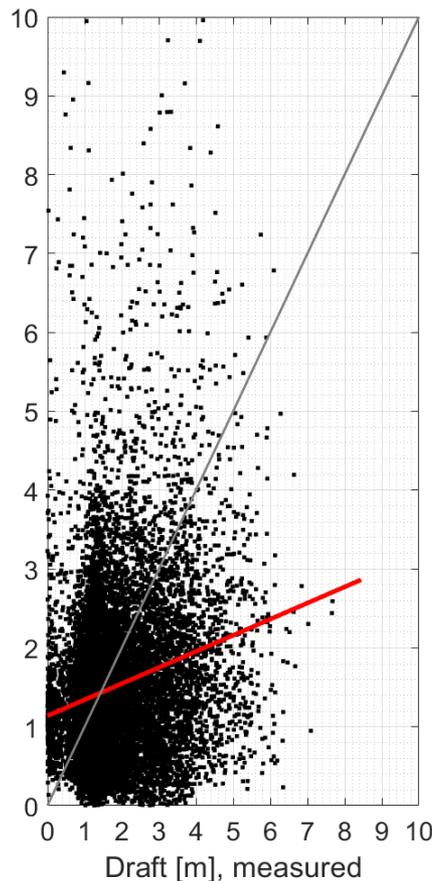

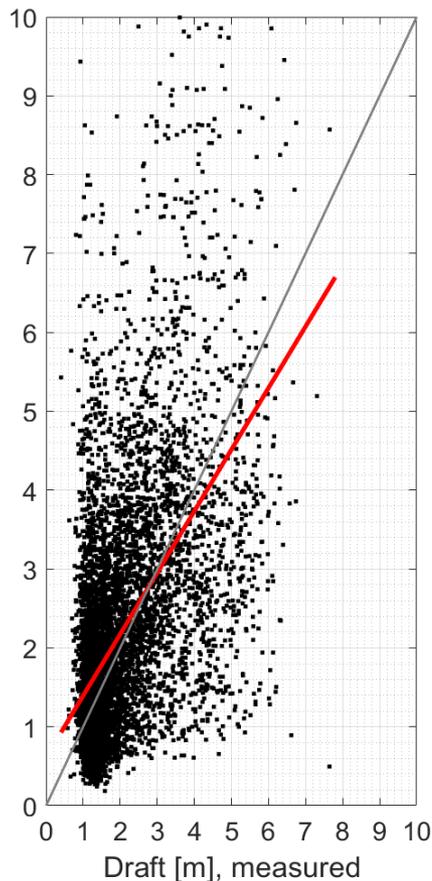

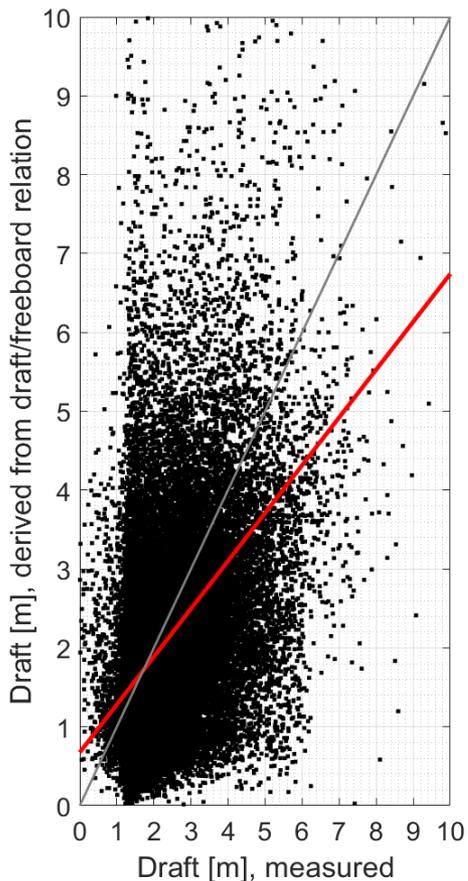

- Comiso et al. (1991) & Wadhams et al. (1992): Mean 7.89

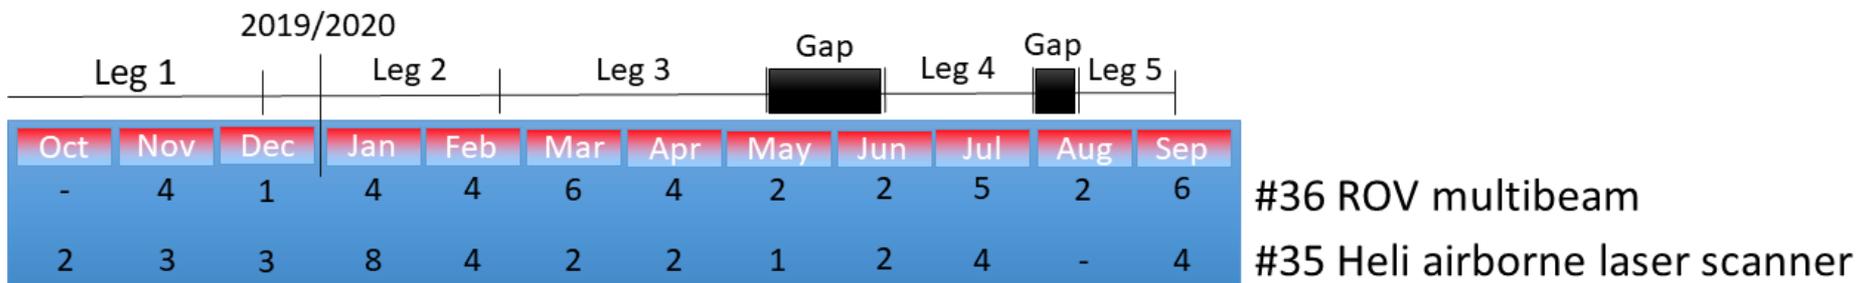

# Objective 2: Draft calculations

$$\text{Draft}_{\text{derived}} = R_{\text{mean}} * \text{freeboard}_{\text{measured}}$$

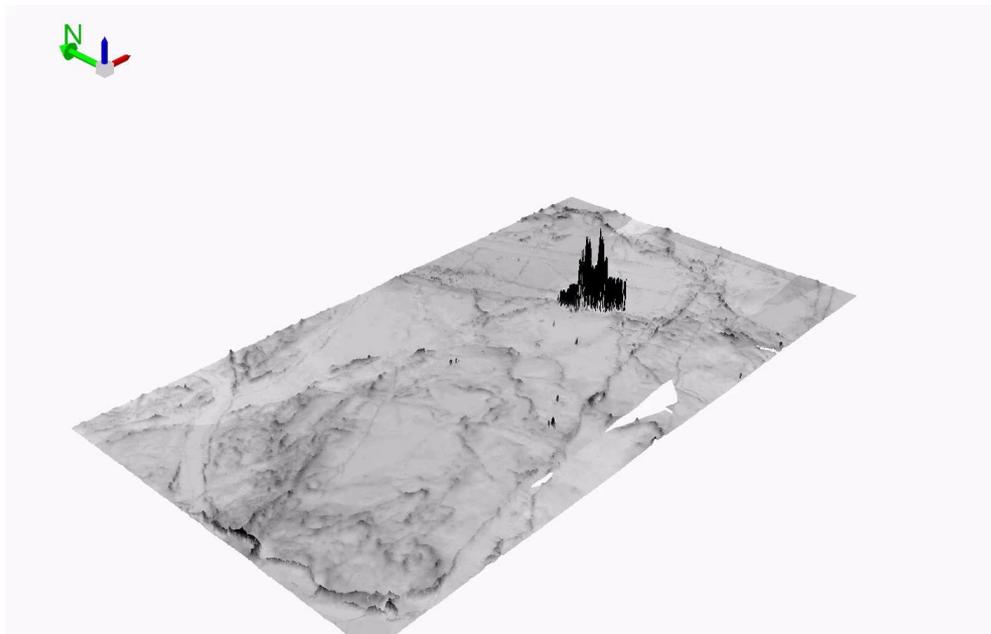

07 Jan	28 Jan	21 Jul	Draft_measured
28 Jan	07 Jan	07 Jan	R_mean
0.19	0.54	0.20	Correlation R

## Seasonal evolution

3D topography model [youtube.com/watch?v=KJf5XOkB5m0](https://youtube.com/watch?v=KJf5XOkB5m0)

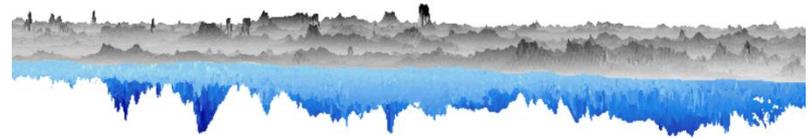

2023

IGS SYMPOSIUM ON SEA ICE  
ACROSS SPATIAL AND TEMPORAL SCALES  
BREMERHAVEN | GERMANY

**Abstract submission by  
TODAY !!!**

Early bird registration by  
28 March 2023

- Processed datasets of sea-ice draft and freeboard (version 1)

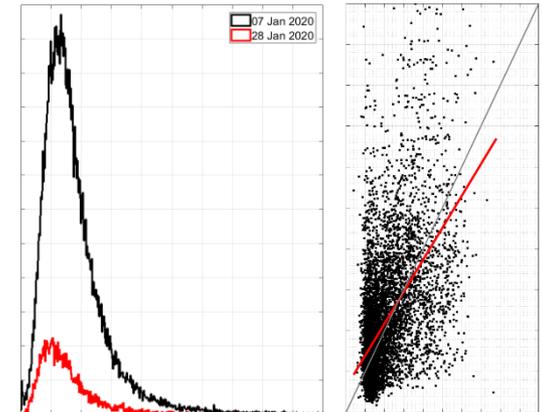

- Merging to 3D for a few selected dates was successful

- Relations  $R = \text{draft} / \text{freeboard}$  are meaningful

- Calculating draft from only freeboard needs more work/other approaches

- Work on the role of density and assumptions made
