

Winners and losers of Atlantification

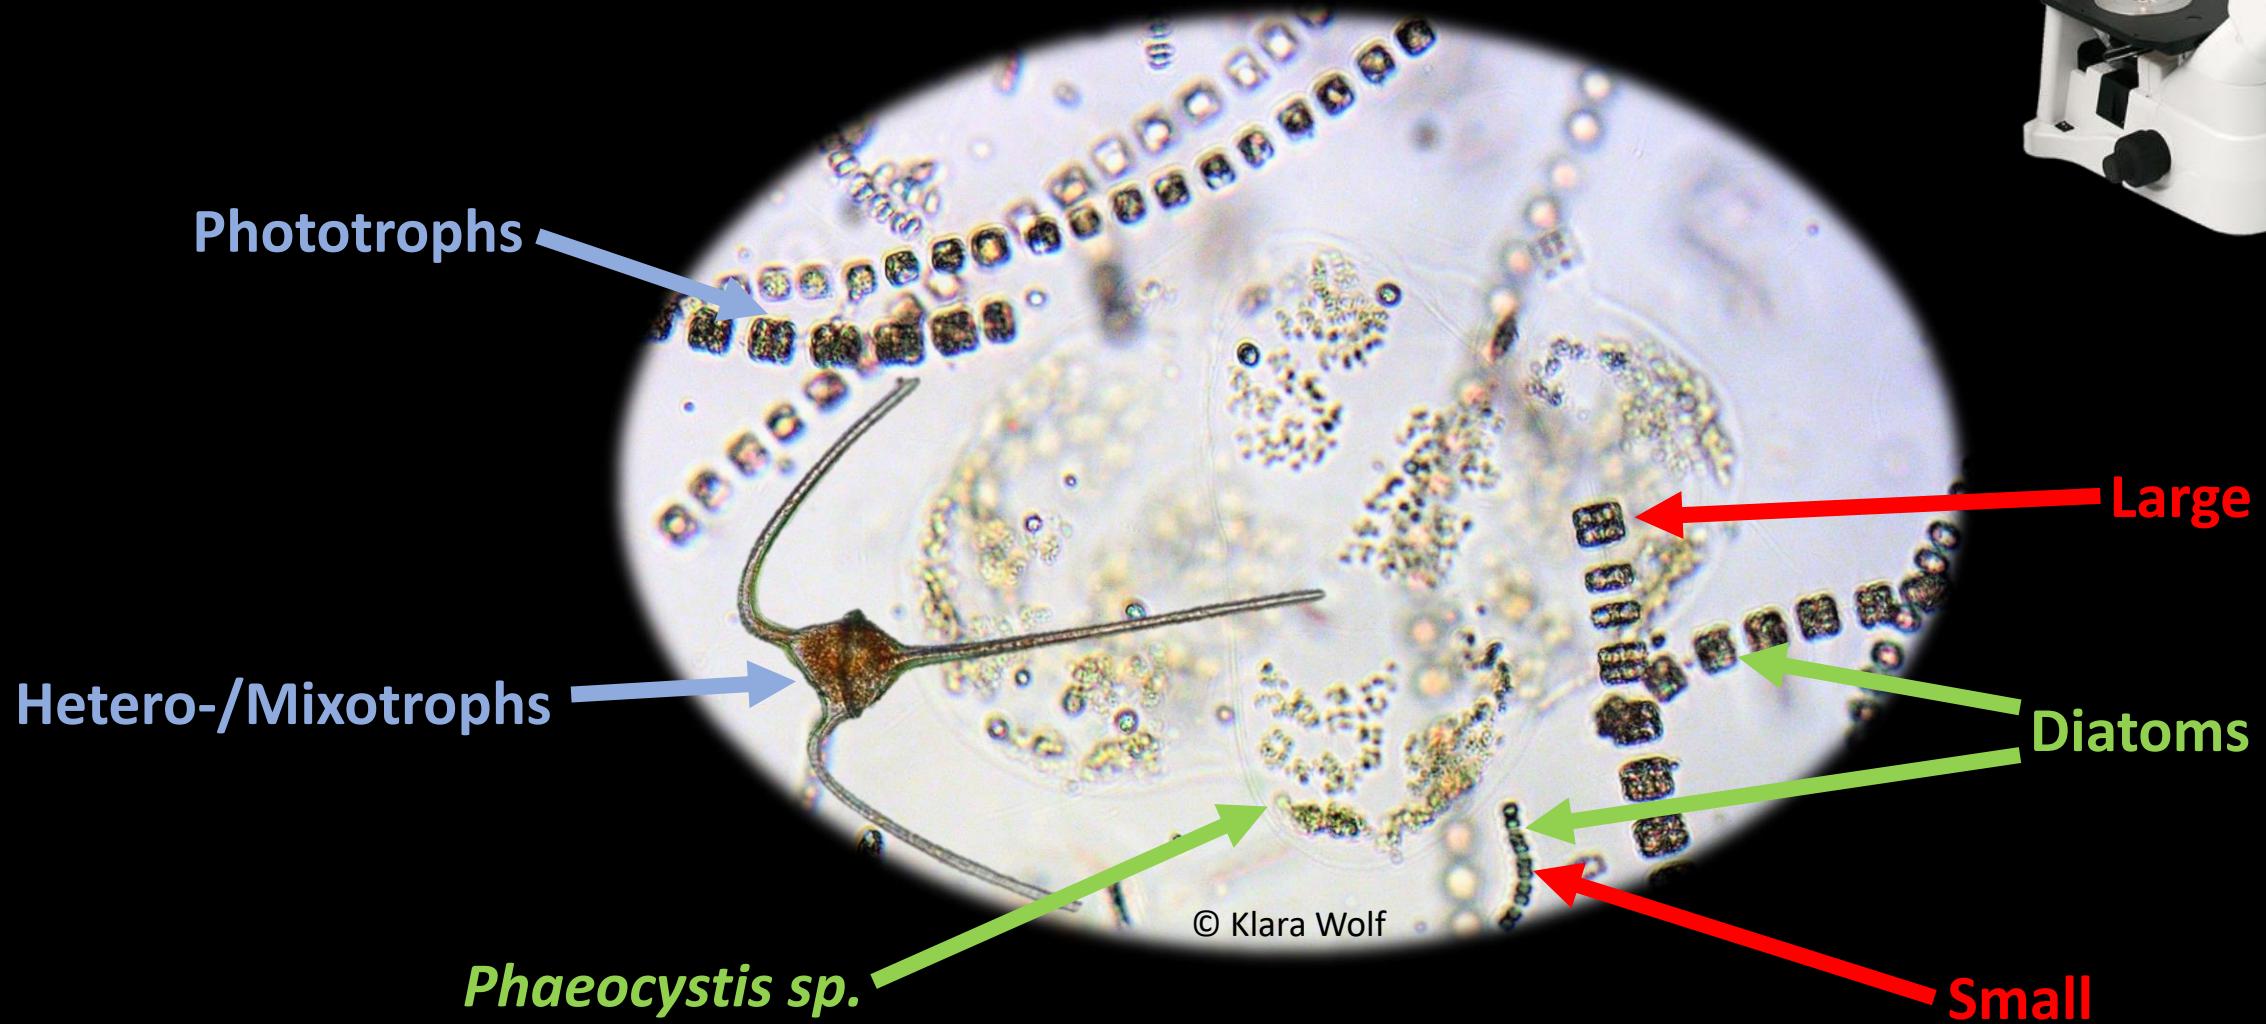

The degree of ocean warming affects the structure of Arctic microbial communities

Published in Genes, doi: 10.3390/genes14030623

Eukaryotic microbes

Climate change & Atlantification

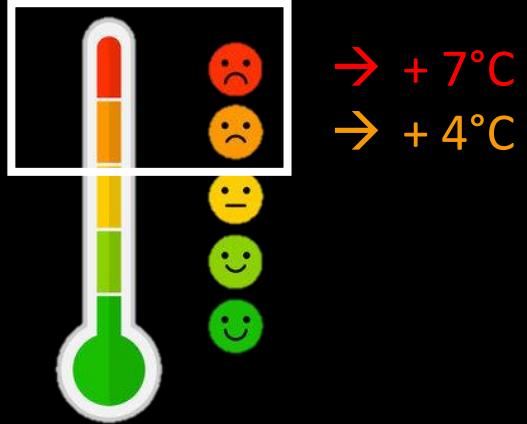

→ + 7°C
→ + 4°C

?

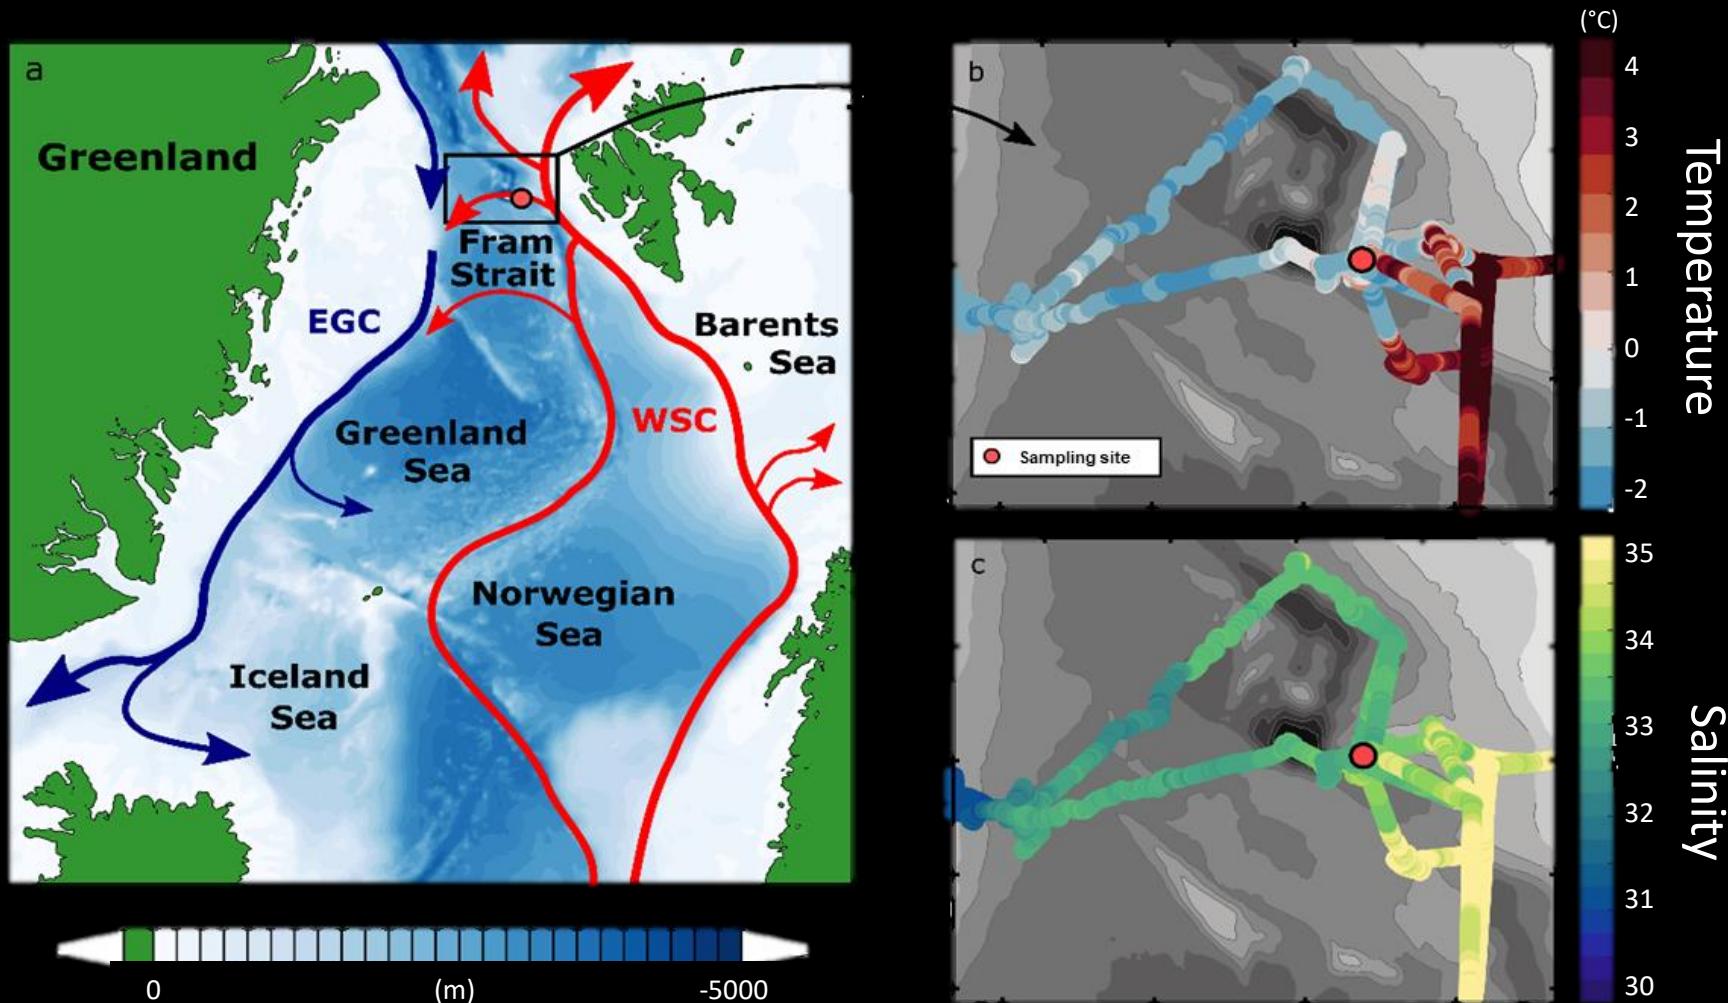

Objective

To experimentally simulate the effect of **different temperature scenarios** on the composition and characteristics of microbial communities from **Atlantic water inflow** to the Arctic Ocean.

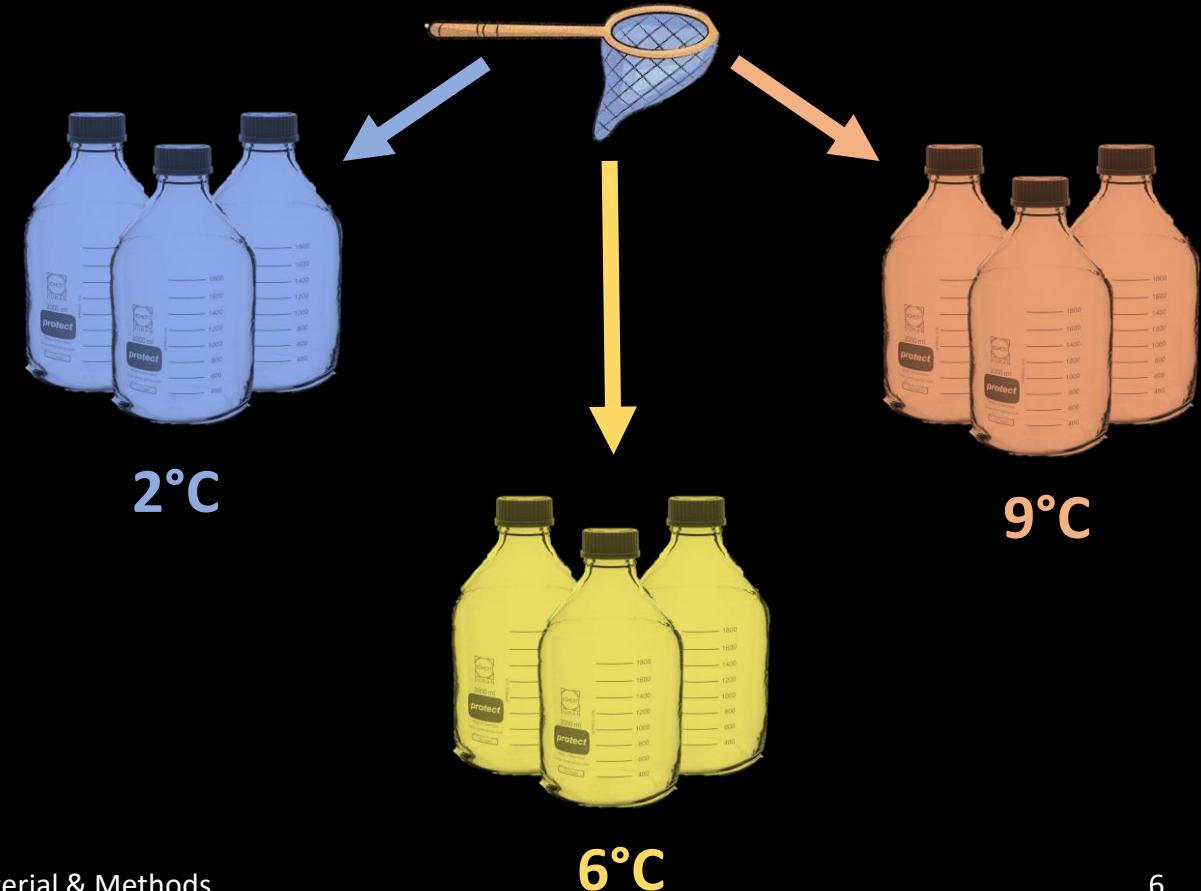

The perfect sampling location

Experiment & parameters

10-day bottle incubation

Experiment & parameters

10-day bottle incubation

DNA → Composition, taxonomic diversity, trait groups

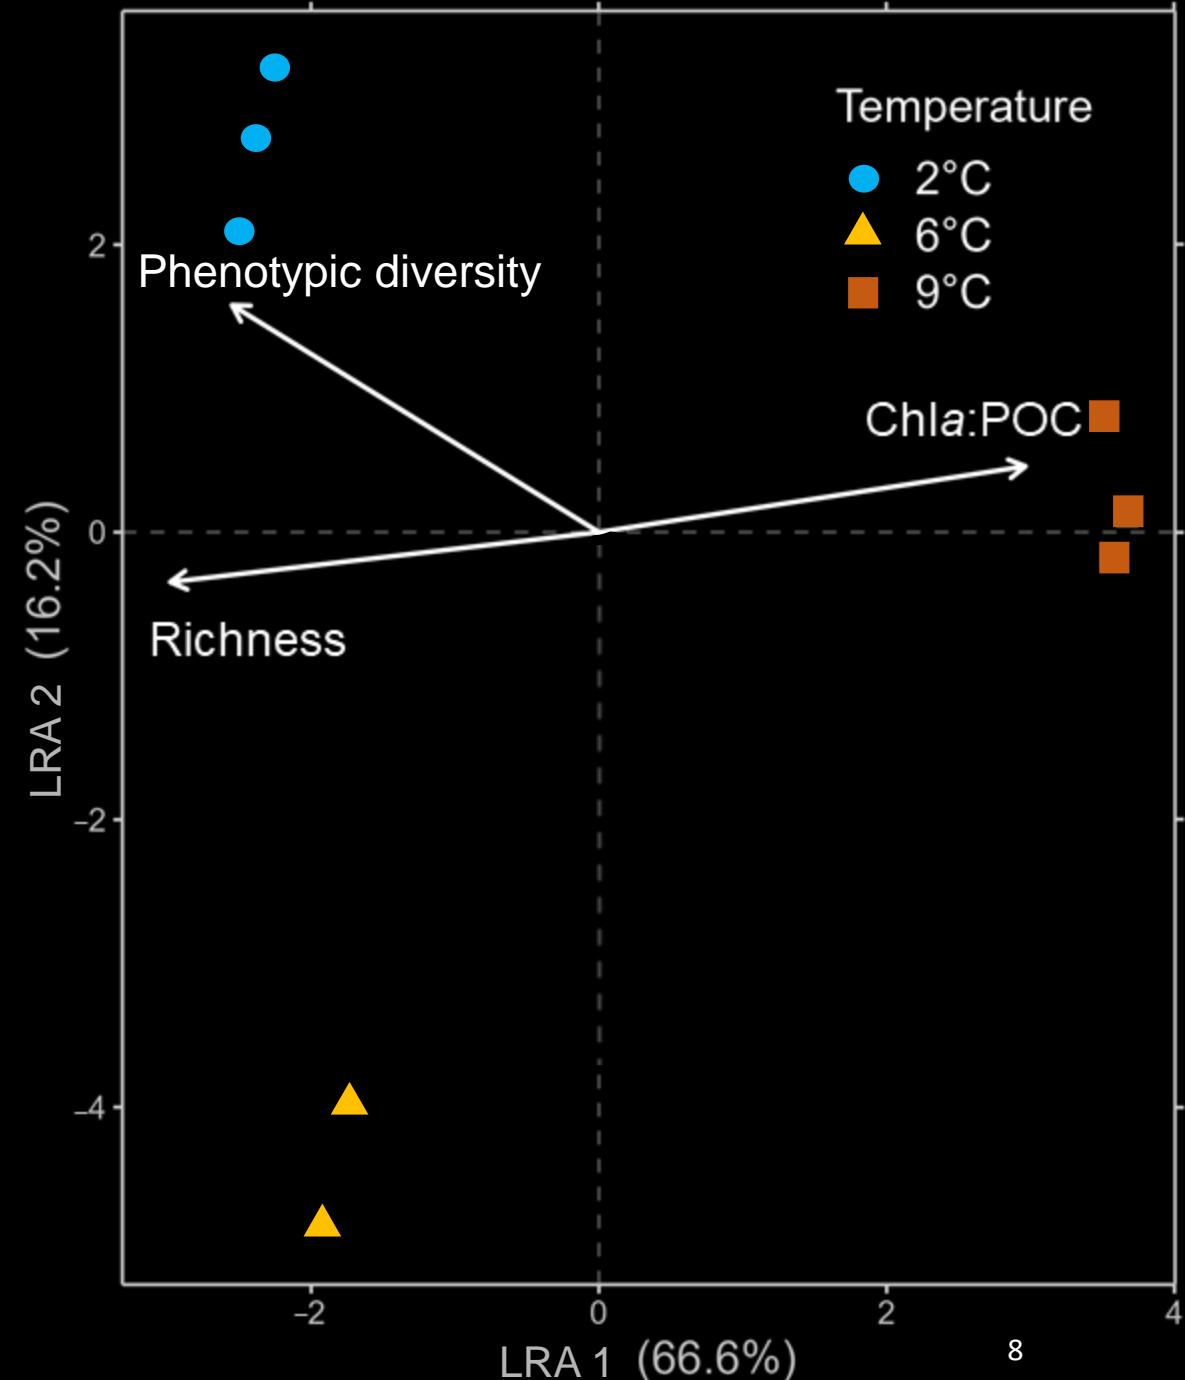

Flow Cytometry → Phenotypic diversity

POC & PON → Biomass & C:N ratio

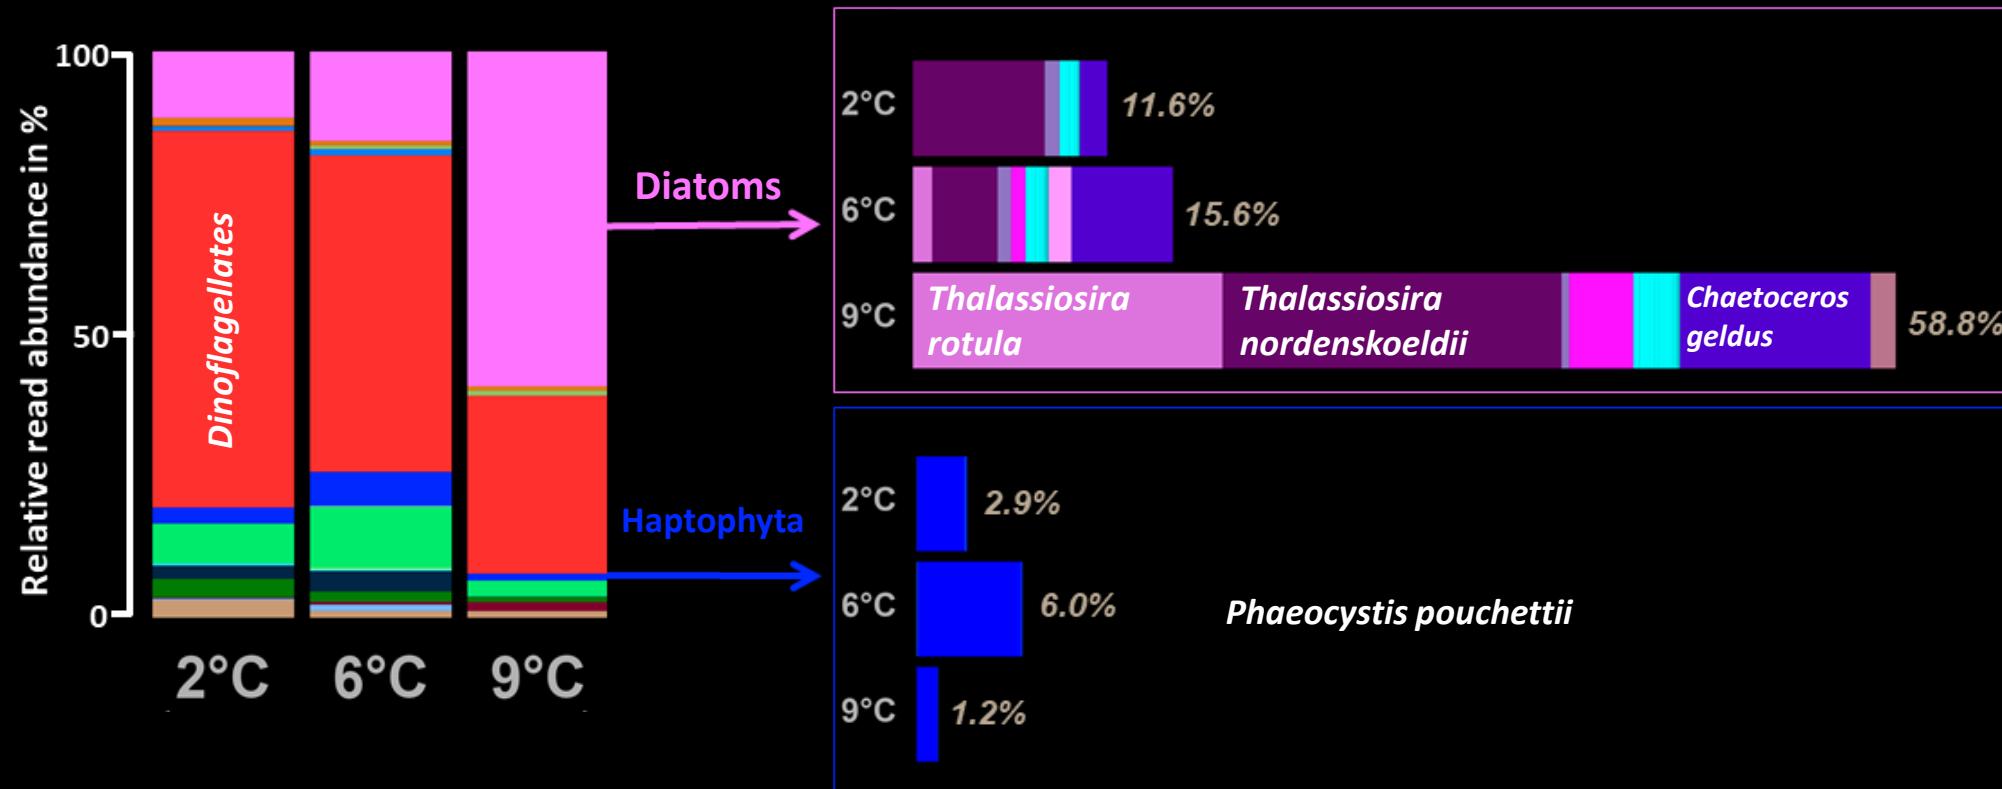

Chlorophyll *a* → Phototrophic biomass

Biomass & diversity

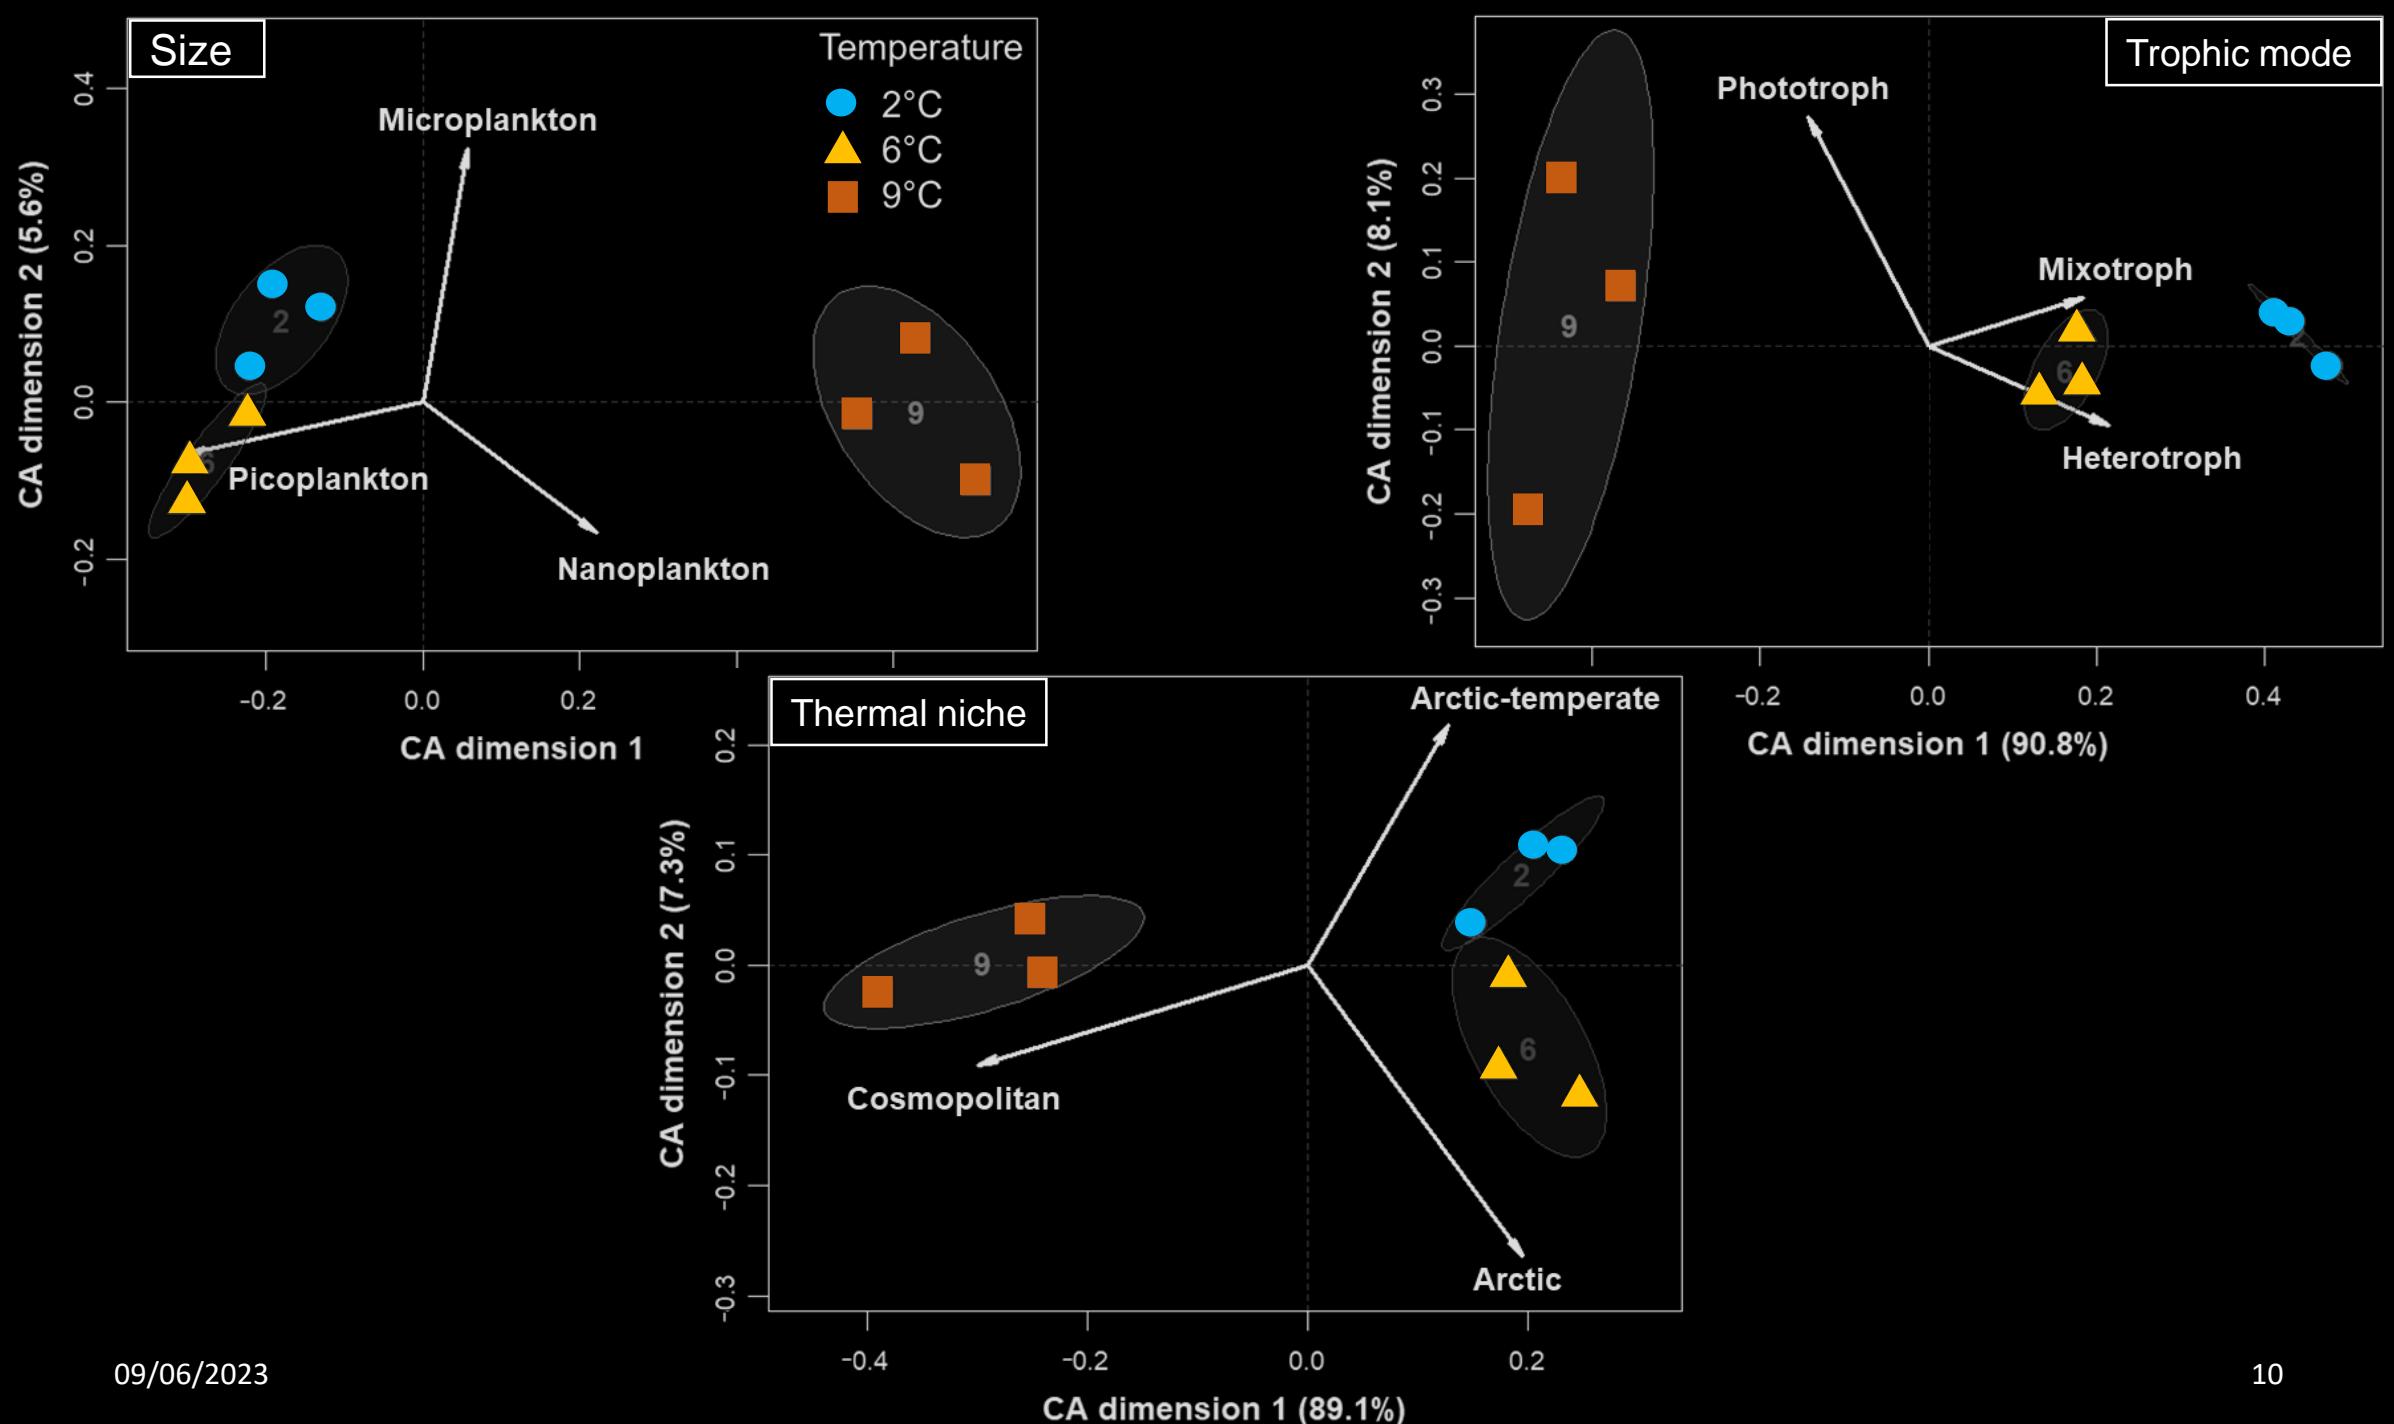

- 2°C and 6°C communities were more similar to each other than to the 9°C community
- 9°C communities had a lower **phenotypic diversity**, lower **species richness**, and a higher **chl_a:POC ratio**
- The **C:N ratio** and **species evenness** did not differ among temperatures

Relative community composition

→ *Phaeocystis pouchettii* mainly prevalent at 6°C and **temperate diatoms** at 9°C

Take home messages

- *Phaeocystis pouchettii* thrives at 6°C and temperate diatoms at 9°C
 - Warming → decrease of species richness & phenotypic diversity
→ increase in photoautotrophic, intermediate-sized organisms
→ shift towards more cosmopolitan species
 - Thermal limit for Arctic key eukaryotes between 6°C and 9°C
- The **degree of warming** matters for the composition and most likely also for ensuing ecosystem functions

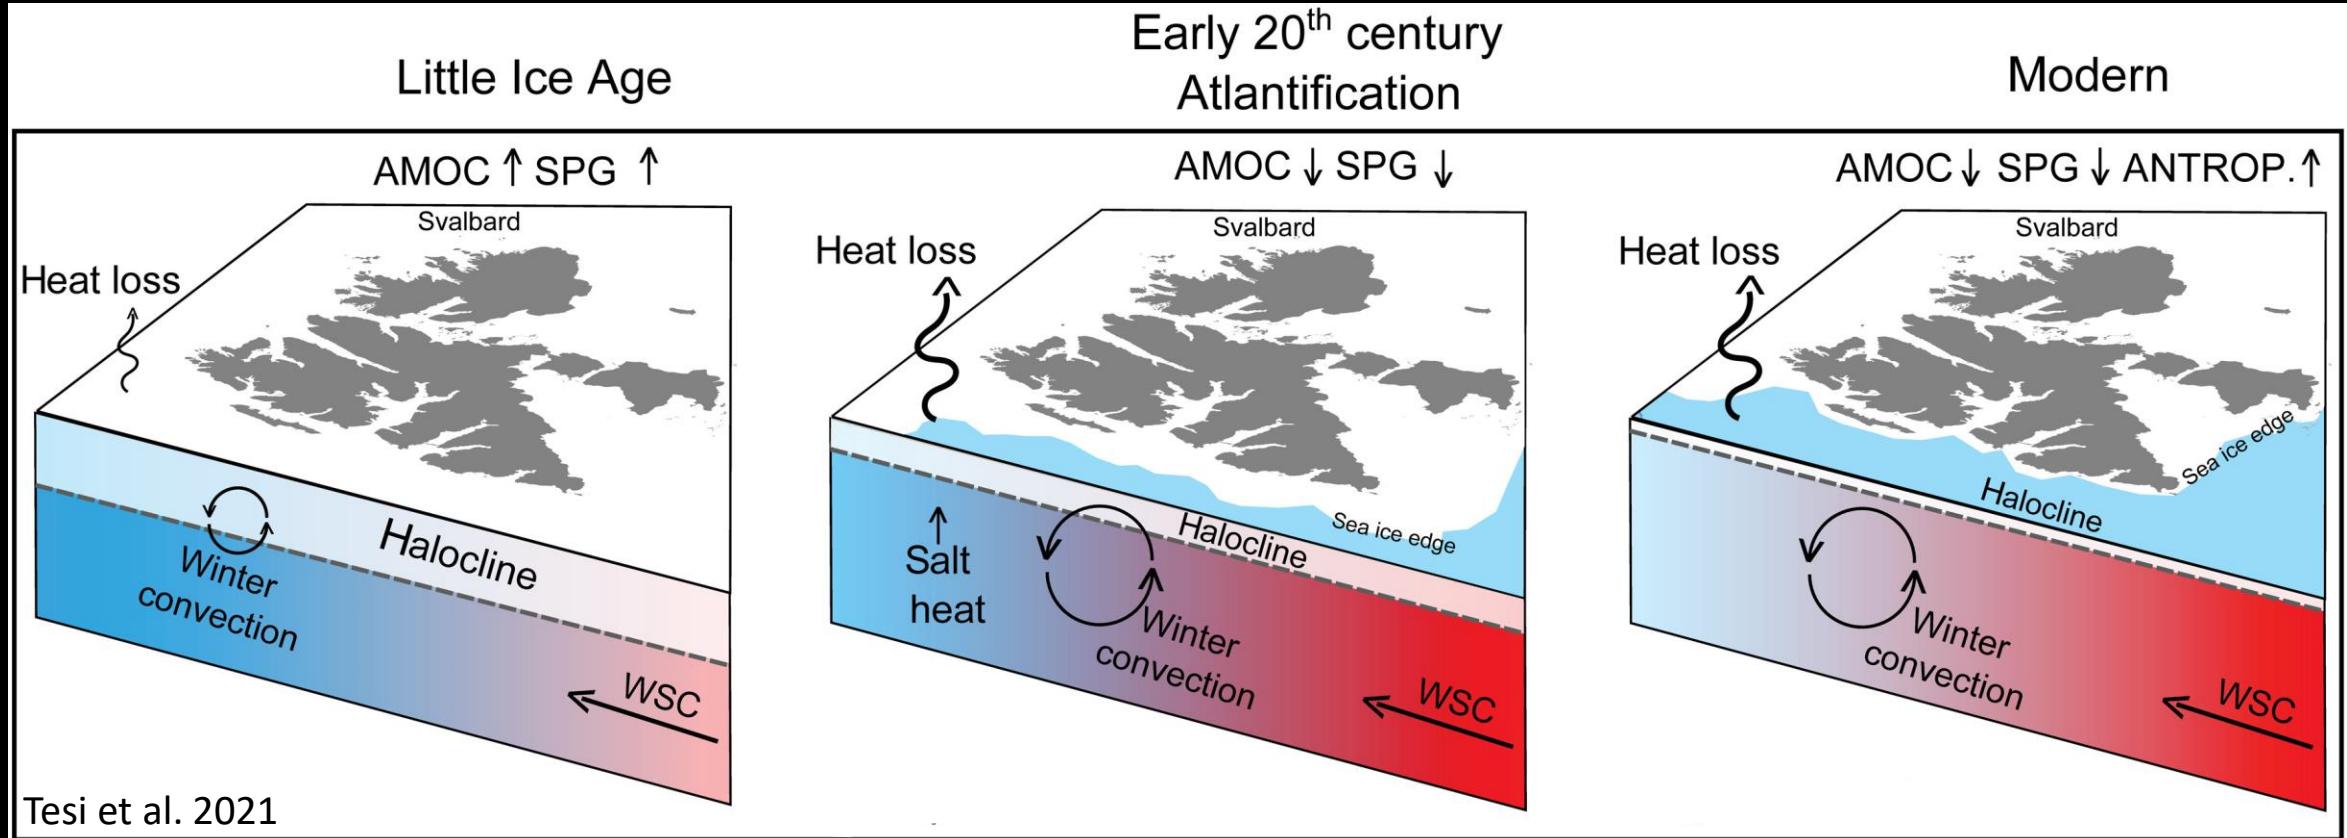

Read the paper to get more funky details on the bacterial response 😊

Thank you!
Questions?

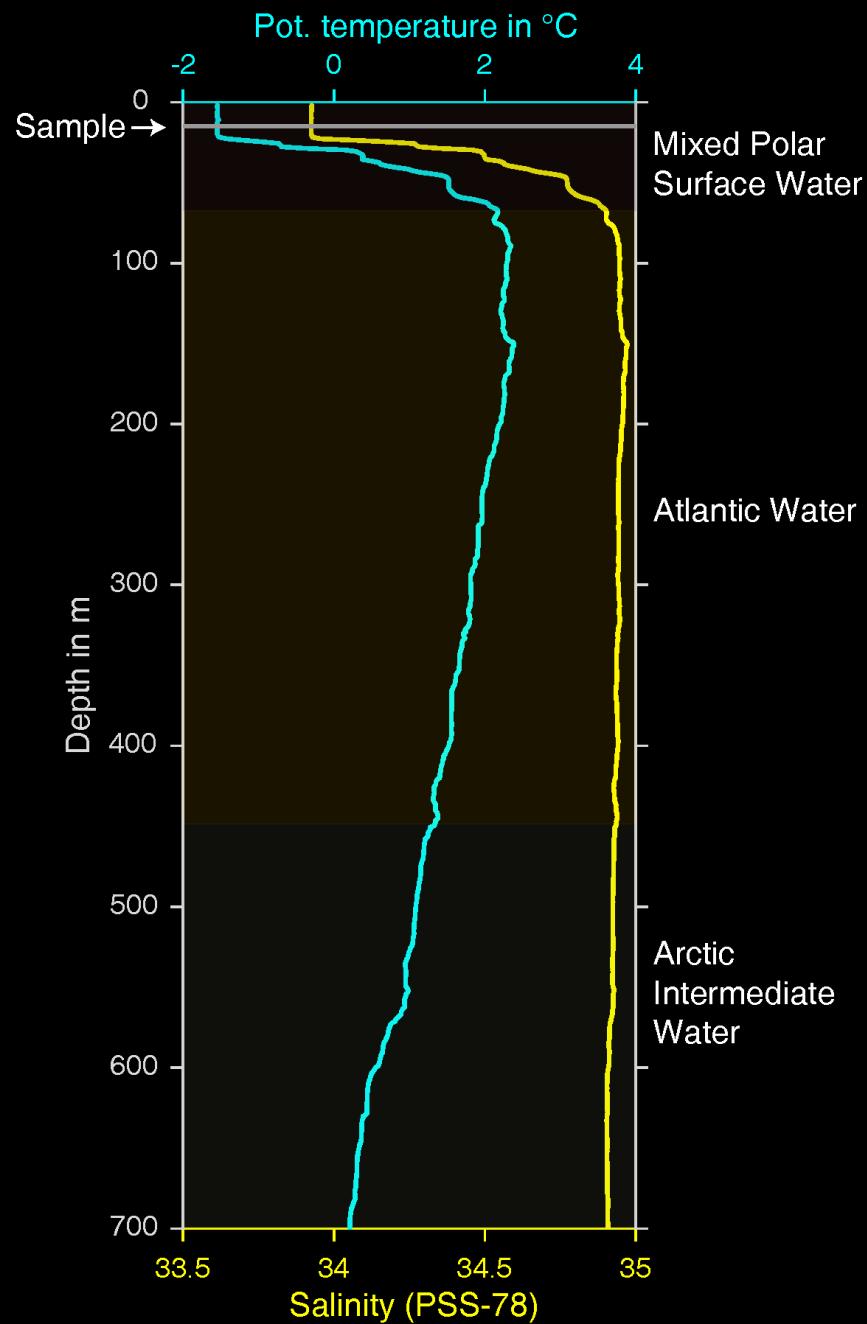

Atlantification of the Arctic

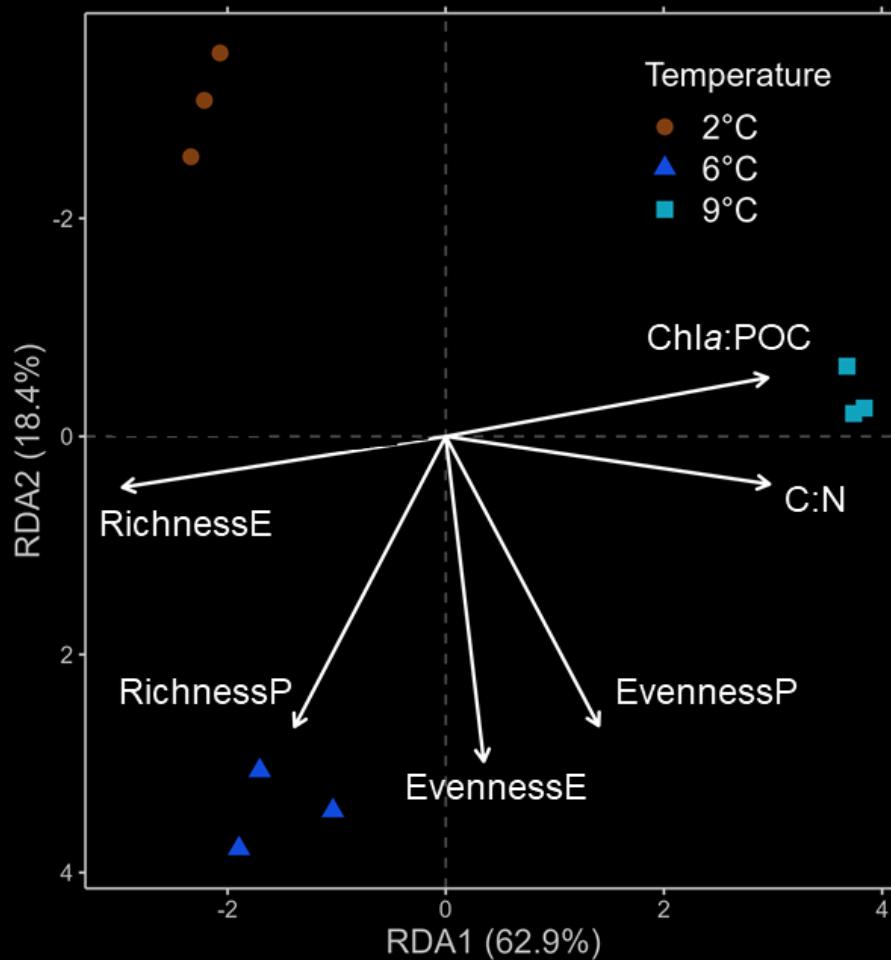

→ Higher temperature, lower salinity, **intrusion of temperate species**

CTD profile

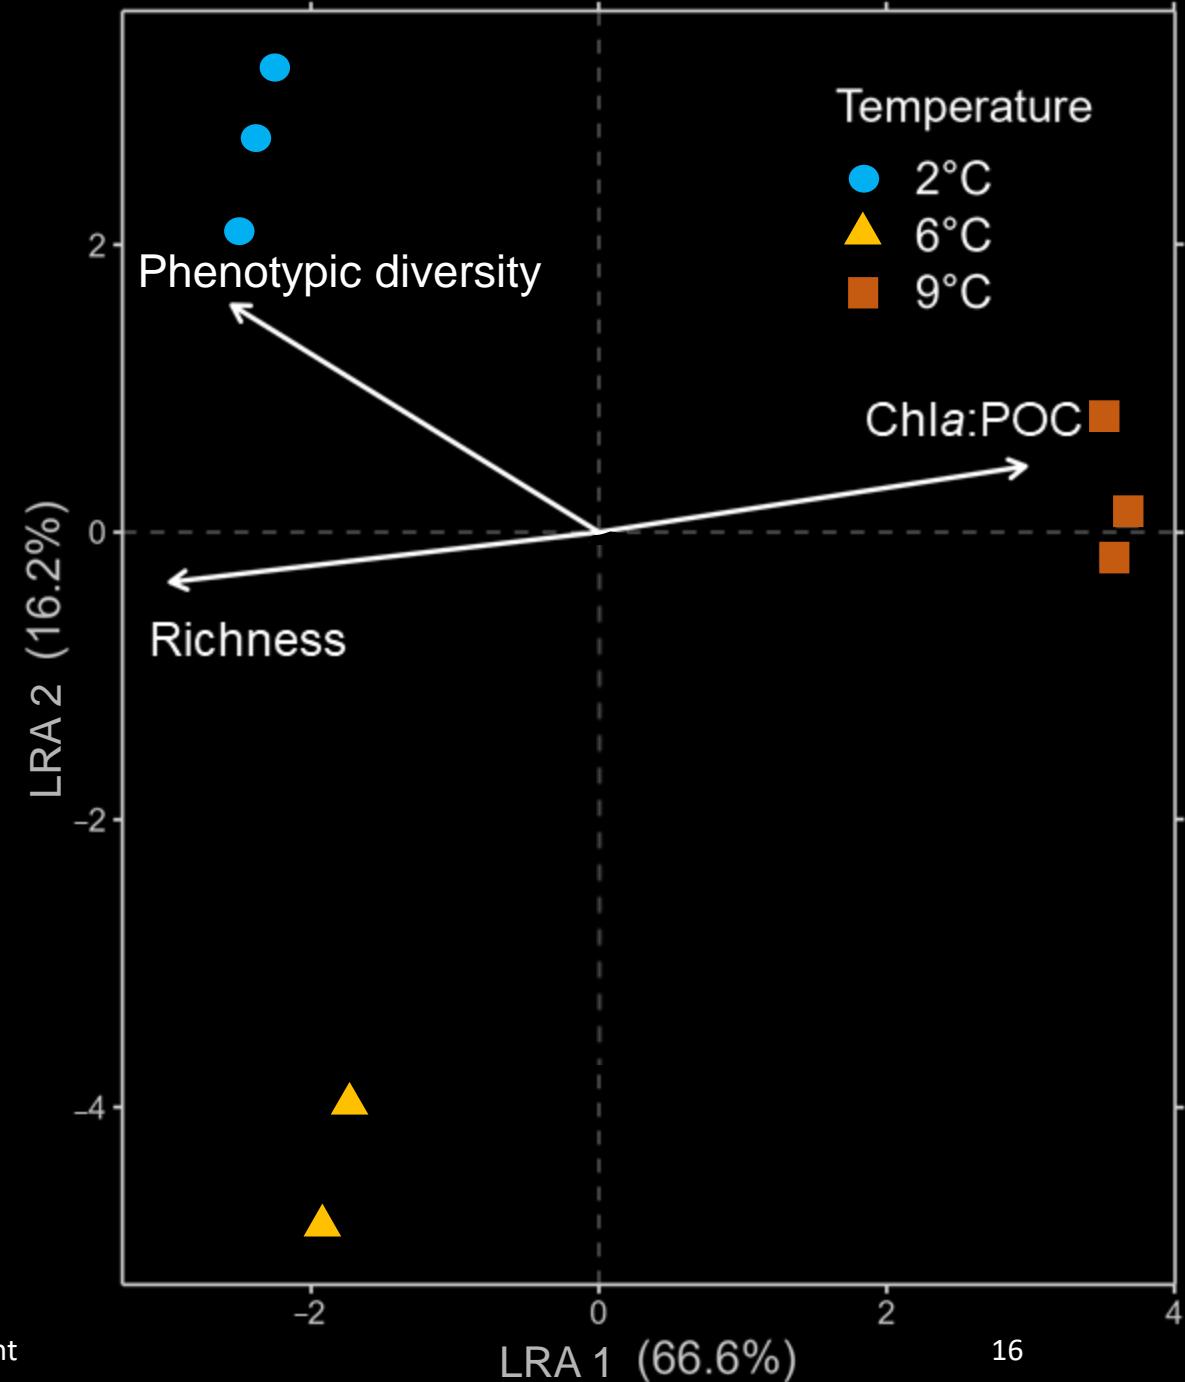

LRA with all 6 °C replicates without PD

Biomass & diversity

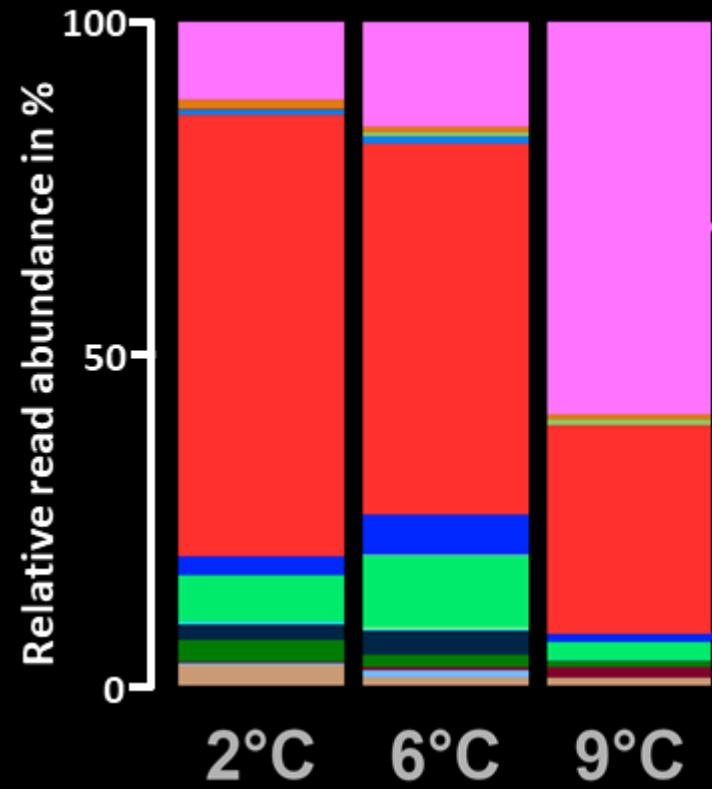

P-values of pairwise, Bonferroni corrected t-tests:

| Pairs | Chla:POC | C:N | Phenotypic diversity | Richness | Evenness |
|-----------|----------|-------|----------------------|----------|----------|
| 2°C - 6°C | 0.751 | 1 | 0.072 | 1 | 0.218 |
| 2°C - 9°C | 0.048 * | 0.433 | 0.008 ** | 0.001 ** | 0.88 |
| 6°C - 9°C | 0.011 * | 0.749 | 0.437 | 0.001 ** | 1 |
